**Editorial policy**  
This report is published for the purpose of enabling a wide range of stakeholders to understand the overall vision for our medium to long-term value creation process, and for explaining in an understandable manner the financial and non-financial information of Nissan Shatai, including management strategies, etc.  
Going forward we will continuously endeavor to transmit information in order to gain the understanding of all of our stakeholders for the activities of Nissan Shatai.  
In editing this report, we referenced the Guidance for Integrated Corporate Disclosure and Company-Investor Dialogue for Collaborative Value Creation 2.0 by the Ministry of Economy, Trade and Industry , the Global Reporting Initiative’s GRI Sustainability Reporting Standards, and the TCFD Recommendations.

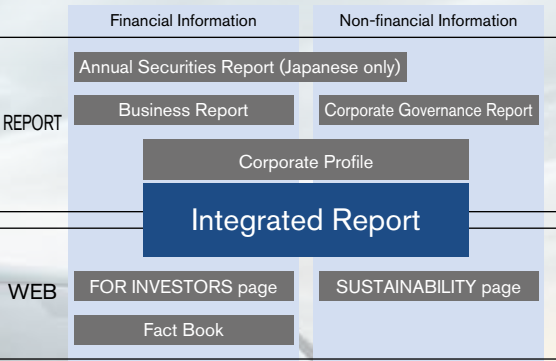

**The period covered by the scope of this report**  
From April 1, 2024 to March 2025. The content of activities outside this period is partially included.

**Range of report target**  
Nissan Shatai Co., Ltd. , Nissan Shatai Kyushu Co., Ltd. and affiliates

**Disclaimer Regarding Forward-Looking Statements**  
The data and forward-looking statements contained in this integrated report are based on information currently available and contain risks and uncertainties. Please be aware that actual performance may differ materially from these statements due to the effects of economic conditions, market trends, foreign exchange fluctuations, and other factors on Nissan Shatai’s business domains in the future. Nissan Shatai assumes no responsibility for any damages arising from the use of this integrated report.

Positioning of the Integrated Report (this report)

**We at Nissan Shatai, as a trusted company,  
Nissan Shatai Group responding to provide unique and  
delivering attractive, high-quality vehicles and services  
to our customers in timely manner.**

I am Takashi Tomiyama, the President of Nissan Shatai Co., Ltd.

Nissan Shatai began as a car body manufacturer for train cars and automobiles in 1949. In 1951, it became a member of the Nissan Group and has since then expanded steadily in the Shonan area in Kanagawa, as well as Uji City in Kyoto. In 2000, the company consolidated the production of its mass-produced vehicles in the Shonan area. Following that, it established Nissan Shatai Kyushu as a new company in 2007 with the aim of establishing a business foundation that can be sustained into the future. The new plant in Kyushu commenced operations in January 2010.

Nissan Shatai has two production bases - Shonan Plant and Nissan Shatai Kyushu. Shonan Plant produces two models including light commercial vehicles (LCV) such as the AD and the NV200 Vanette while Nissan Shatai Kyushu produces six models including the Elgrand minivan, the Armada full-size SUV (Sport Utility Vehicle) and the Caravan LCV, etc.

Nissan Shatai owns proprietary expertise in the development and production of LCV and frame-vehicles and is responsible for their development

and production within the Nissan Group.

Our three major businesses are as follows.

The first business is "commercial vehicles and premium cars."

Through the evolution and deepening of uniqueness, we will work toward the enhancement of manufacturing technological capabilities and productivity, and raise the added value of the products to expand profits and the number of units sold.

The second business is "specially equipped vehicles." In the specially equipped vehicle business, in which future growth potential and high profitability can be expected, we will work toward business expansion by responding rapidly to the diversifying needs of our customers.

The third business is "support businesses."

We will work toward expansion of production volume and business volume in our full range of support businesses, including service parts, engineering consignments, prototyping, molds and tools, and facilities.

In fiscal year 2023, Nissan Shatai has started a Medium-Term Management Plan covering fiscal

years 2023 to 2027 with an awareness of the environmental changes of "the necessity of a response to climate change," "changes in the needs of the market," "increase in the societal responsibilities required of companies" and "changes in the working population and the awareness of employees."

Taking into account these environmental changes, we have defined our Vision for our Future as "Contribute to society through our commercial vehicles, premium cars, specially equipped vehicles, and support businesses and become the one and only presence trusted by our customers" and we are working to expand these three major businesses.

The first pillar is "Sustainable corporate foundation." In this Medium-term Management Plan, we advocate a "Sustainable corporate foundation" in as the central pillar of our activities, and we are tackling ESG issues, namely "environmental," "social" and "governance" issues to promote business activities centered on sustainability.

Furthermore, the "sound mind and body of employees" are essential for these activities, and Nissan Shatai will actively promote health and productivity management.

The second pillar is "Creation of appealing products." In fiscal year 2024, Infiniti QX80, the Nissan Patrol, and the Armada underwent a full model change. Equipped with various advanced technologies, they serve as Nissan's flagship models representing our pursuit of luxury, power, and comfort.

As for specially equipped vehicles, we achieved a record number of orders for our high-spec ambulance (Paramedic). In addition, following the Caravan MYROOM in the in-car accommodation series, we began production of the compact-sized NV200 Vanette MYROOM, which has been well received.

The third pillar is "Evolution and deepening of uniqueness."

While it plans to stop AD production in November 2025 and NV200 Vanette production in March 2027, the Shonan Plant will explore the possibility of vehicle production as well as considering taking on support businesses such as the production of

specially equipped vehicles and service parts. Giving first priority to the employment of its employees, the Shonan Plant continue to examine all possible options.

Nissan Shatai Kyushu is working to further improve productivity and increase production capacity to meet the high market demand for the three new models it started producing in fiscal 2024.

For service parts production, we will promote technological development, such as processes for low-volume production, aiming to expand business and increase profitability.

In the halfway point of the 2023-2027 Medium-term Management Plan, Nissan Shatai wants to further enhance trust from stakeholders by bolstering integrated manufacturing operations that extend from development to production, which is our strength, and working to improve legal compliance and corporate governance.

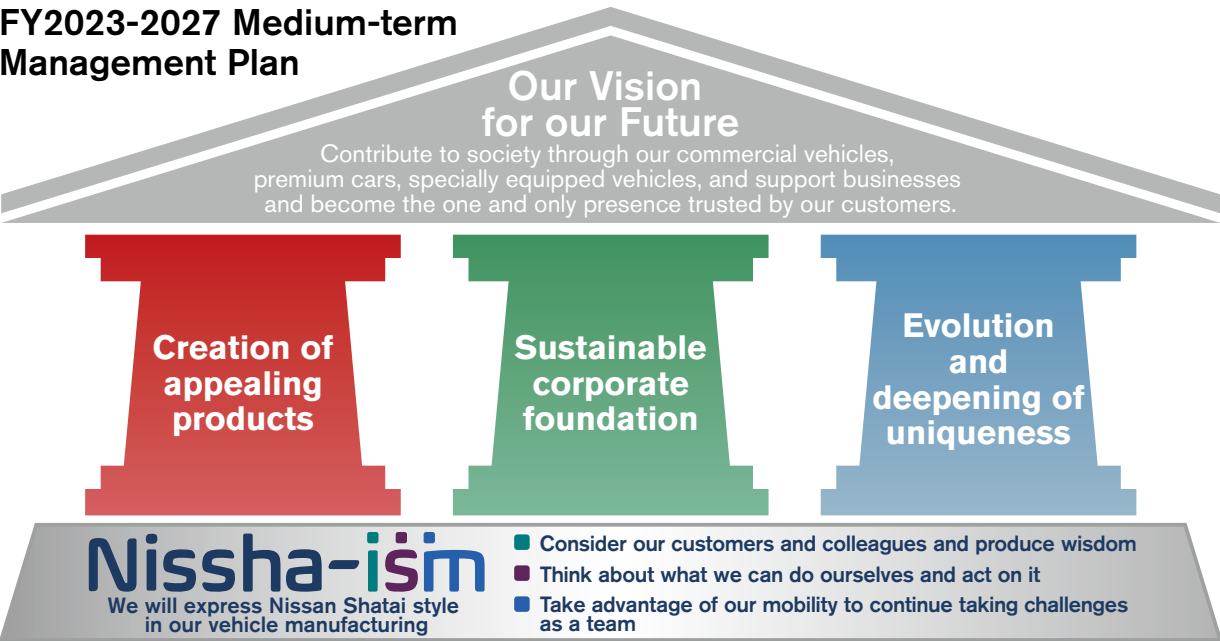

August 2025

President

*Takashi Tomiyama*

**FY2023-2027 Medium-term  
Management Plan**

# Corporate Purpose · Mission, etc.

## Corporate Purpose

Driving innovation to enrich people's lives.

## DNA

Do what others don't dare to do

passionate innovative challenger agile

## Mission

As a trusted company, Nissan Shatai Group responding to provide unique and delivering attractive, high-quality vehicles and services to our customers in timely manner.

## Nissha-ism

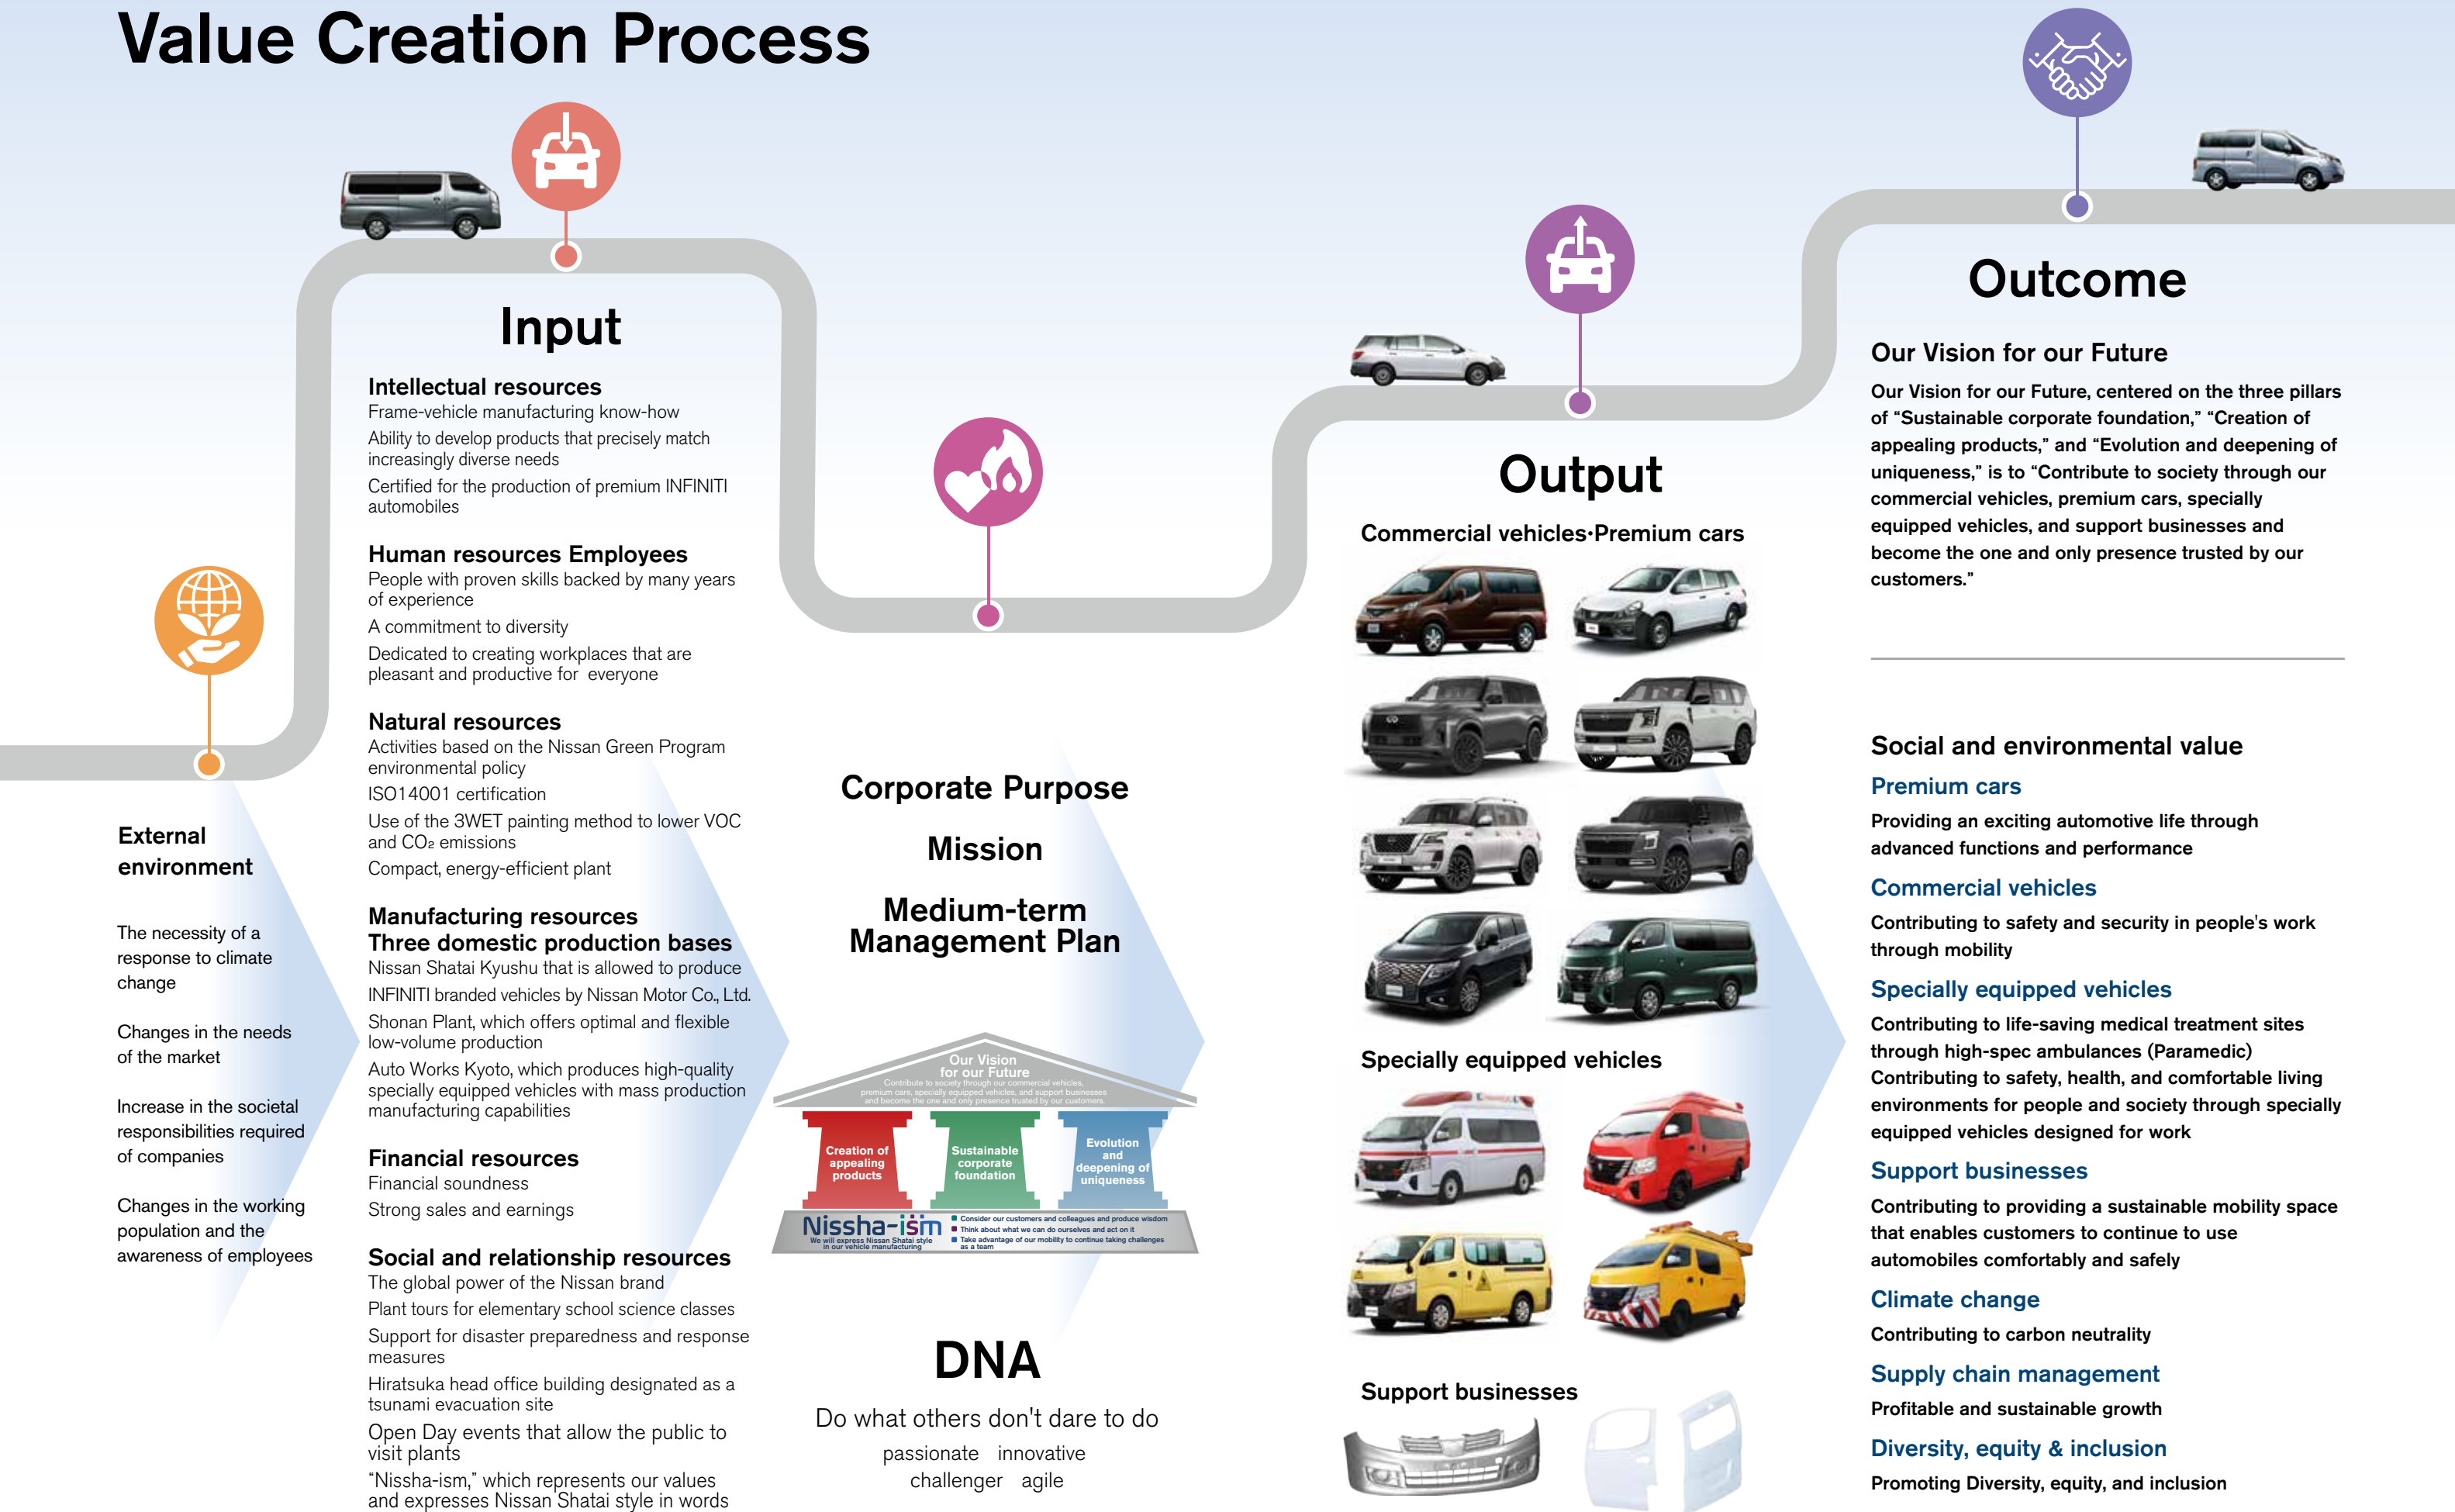

We will express Nissan Shatai style in our vehicle manufacturing.

- Consider our customers and colleagues and produce wisdom
- Think about what we can do ourselves and act on it
- Take advantage of our mobility to continue taking on challenges as a team

# Value Creation Process

# The trajectory of value creation (history of Nissan Shatai)

~1960's	1970's	1980's	1990's	2000's	2010's	2020's~
Postwar reconstruction and motorization	The rapidly-growing automobile industry	The recession after the second oil shock and how it was overcome	Burst of the economic bubble and changes to customer preferences	Burst of the economic bubble and changes to customer preferences	Advancing technological innovation Entering an era of upheaval in the automotive industry	New values and changes in lifestyle and working styles

## Efforts for the establishment of a mass production system

Shin Nissoku Kogyo Co., Ltd. was established in 1949 and the company was renamed Nissan Shatai Koki Co., Ltd. in 1962. The company subsequently gradually stopped producing bus bodies, power units, automotive parts and other products in order to focus exclusively on the fully integrated assembly of motor vehicles.

The Nissan Patrol (R2W61D), the first car to undergo integrated offline production from chassis assembly onward

## The "Fairlady Z" built the roots of Nissan Shatai

The "Fairlady Z (S30)" was completed in 1969 as the successor to the "Fairlady". Here, "Z" symbolizes the ultimate performance of this vehicle. Despite its innovative style and high performance, it was priced at the level of passenger vehicles, making it a wildly popular vehicle in North America. Within 10 years, 520,000 units were produced—a phenomenal figure for a sports car. Nissan Shatai grew and developed significantly as a result of its involvement in the production of this vehicle.

"Fairlady Z (S30)"

## Response to energy conservation and the rapid increase in exports

Response to energy conservation and the rapid increase in exports. Due to the orientation toward energy conservation, the economy and fuel efficiency of Japanese-made small cars attracted attention, so exports increased rapidly. In 1980 Japan became the top automobile producing country in the world. At Nissan Shatai too, export vehicles such as the Violet Wagon (WA10), Caravan (E23) and Fairlady Z (S130) performed strongly.

The Fairlady Z (S130), which was shipped to the United States

## Building the current foundation with the minivan

Nissan Shatai achieved dramatic business expansion through the "Fairlady Z". It captured the minivan boom in the 1990s and launched Nissan's flagship minivan, "Elgrand (E50)" into markets around the world. Nissan Shatai took up the challenge by integrating its development and production divisions, giving birth to the first-class, top-level minivan, the first-generation Elgrand, which achieved record sales exceeding 230,000 units over five years.

"Elgrand (E50)"

## Providing customers with attractive vehicles, from premium cars to commercial vehicles and specially equipped vehicles

To meet the needs of the thriving "camping car" market which has been booming since the COVID-19 pandemic, we have been expanding the special customization operation, for example by producing the Caravan MYROOM with outstanding livability and comfort, and we are quickly delivering the vehicles our customers want in the LCV and SUV sectors. We are working to build vehicles which can meet the various needs of the market.

CARAVAN MYROOM

## New plant commences operations Meets the needs of the times with two production bases

In 2010, Nissan Shatai Kyushu commenced operations, establishing two production bases: Shonan and Kyushu. The Shonan Plant led global LCV expansion, with the NV200 that it developed becoming a global strategic LCV produced worldwide. The vehicle was also selected as the next-generation New York taxi. Nissan Shatai Kyushu produces the QX80, part of premium INFINITI brand lineup. With the latest facilities and the advanced skills of its "artisans," the plant plays the role of manufacturing the small numbers of INFINITI vehicles that go out to the world.

Nissan NV200 selected as New York city's "TAXI OF TOMORROW"

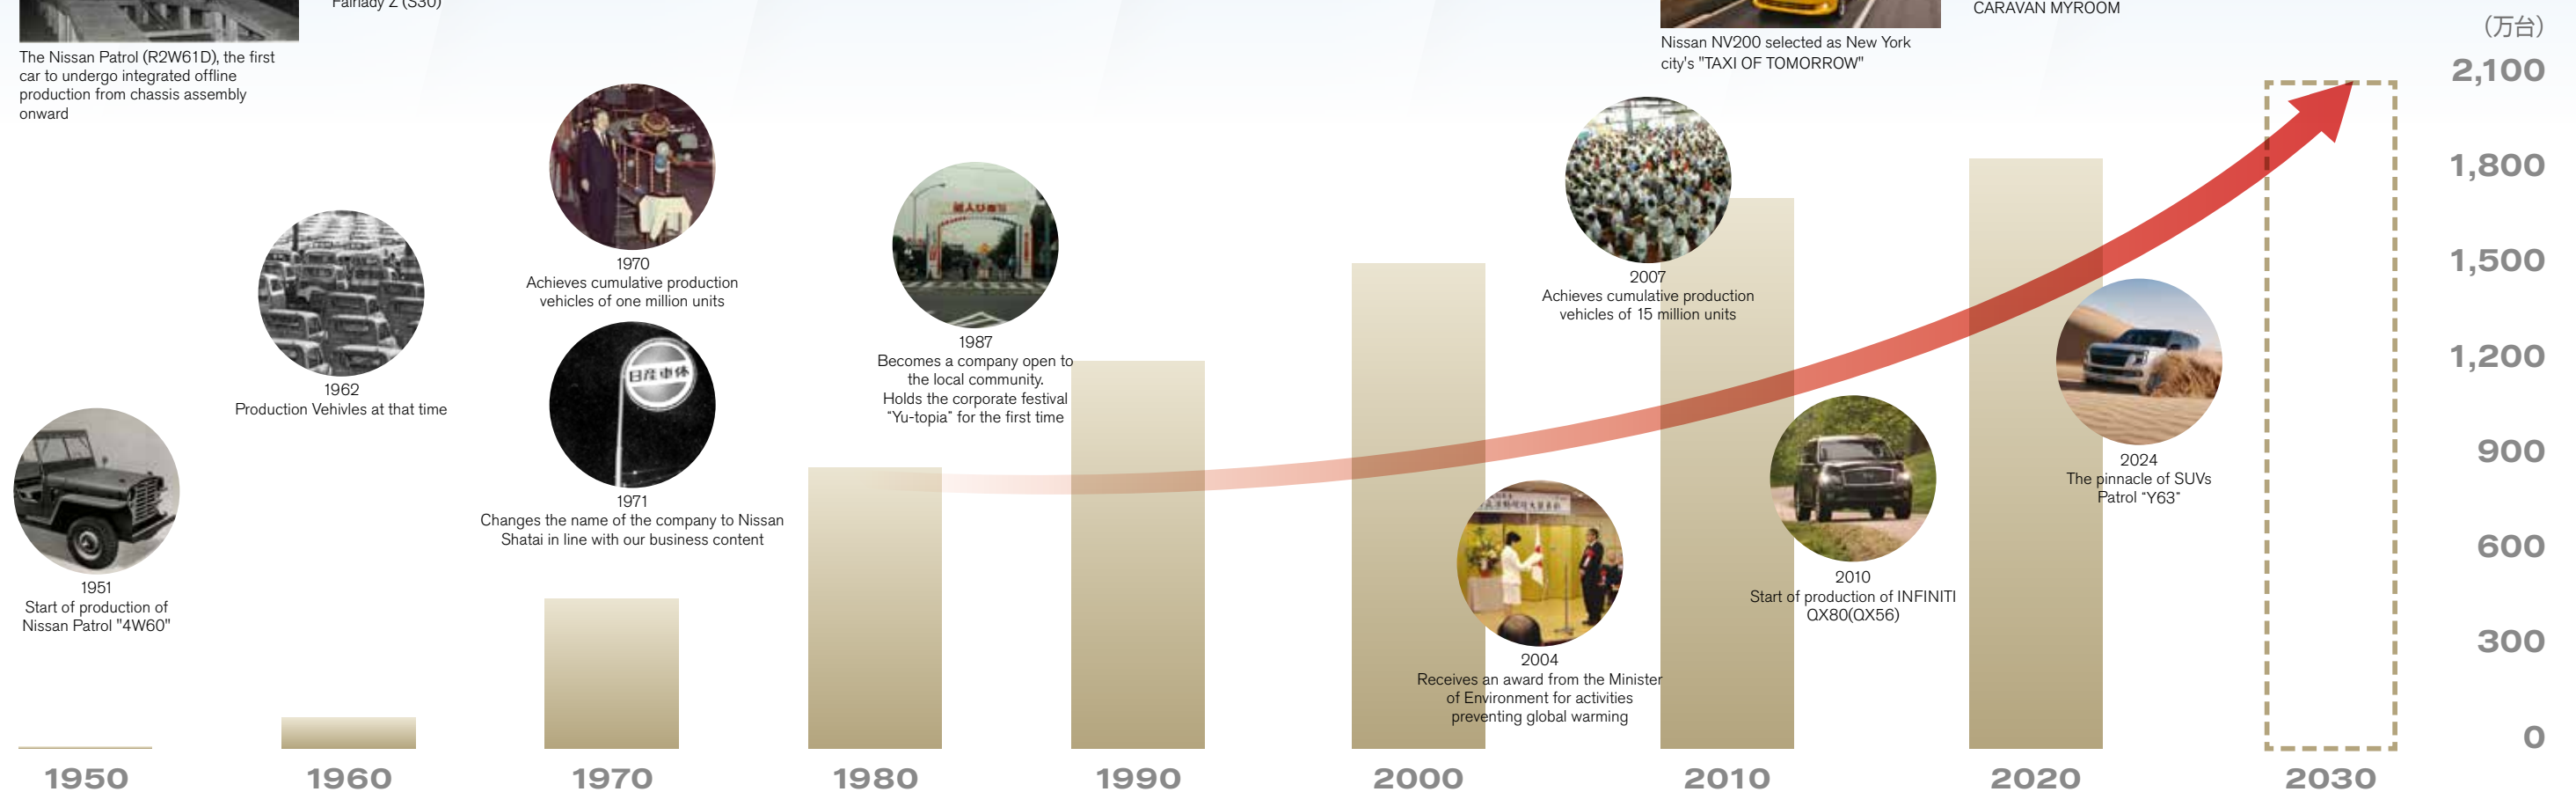

## Providing customers with attractive vehicles, from premium cars to commercial vehicles and specially equipped vehicles

To meet the needs of the thriving "camping car" market which has been booming since the COVID-19 pandemic, we have been expanding the special customization operation, for example by producing the Caravan MYROOM with outstanding livability and comfort, and we are quickly delivering the vehicles our customers want in the LCV and SUV sectors. We are working to build vehicles which can meet the various needs of the market.

CARAVAN MYROOM

Creating new value through our commercial vehicles, premium cars, specially equipped vehicles, and support businesses.

# Major Businesses

## Nissan Shatai is a vehicles manufacturer which has manufacturing functions from development to assembly

Nissan Shatai is a vehicle manufacturer that is engaged in the processes from development to production upon consignment from Nissan Motor Co., Ltd.

When producing a new car, based on the concept and design for the car, it carries out processes from development including design, prototyping, and testing, to preparations for production such as plant assembly line design and introduction of assembly facilities, pressing, welding of car body, painting, vehicle assembly, and quality assurance.

### ■ Development

Through technologies such as virtual analysis, and over repeated cycles of checks for high productivity before mass production and testing on the test courses, we carry out efficient design work aiming to “zero design changes”.

### ■ Production preparation

Based on the concept of the Nissan Production Way (NPW), we have established highly productive, quality plants through the introduction of cutting-edge technology and facilities.

### ■ Production

At our two production bases, the Shonan Plant and Nissan Shatai Kyushu, we are improving production efficiency and producing quality cars while remaining environmentally friendly.

### ■ Specially equipped vehicles

Nissan Shatai is also injecting effort into built-to-order manufacturing for specially equipped vehicles, which serve different purposes from one vehicle to the next. Specially equipped vehicles are produced by a group company, Auto Works Kyoto, which delivers specially equipped vehicles that meet the needs of customers through an integrated system from development to production.

### ■ Development and production support that leverages the know-how we have cultivated

Nissan Shatai is not only carrying out vehicle manufacturing processes at our domestic bases but also providing support for the development of LCVs and the production of new vehicle models at global Nissan plants and for the preparation and establishment of new plants and production lines.

amount  
of sales

Nissan Shatai Group will work toward expansion of the following major businesses in the Medium-term Management Plan starting from FY2023.

- 1. Commercial vehicles and premium cars**  
Through the evolution and deepening of uniqueness, we will work toward the enhancement of manufacturing technological capabilities and productivity, and raise the added value of the products to expand profits and the number of units sold.
  - 2. Specially equipped vehicles**  
In the specially equipped vehicle business, in which future growth potential and high profitability can be expected, we will work toward business expansion by responding rapidly to the diversifying needs of our customers.
  - 3. Support businesses\***  
We will work toward expansion of production volume and business volume in our full range of support businesses, including service parts production, engineering services, and vehicle electrification support.
- \* Support businesses  
service parts, engineering services, trial production, dies and jigs, equipment, and others

2023

2027

# Sustainable corporate foundation

**Nissan Shatai will realize carbon neutral by 2050. Through the efforts of all of our employees we will realize a company climate in which anyone can work with motivation and peace of mind.**

Whilst pursuing growth in earnings, Nissan Shatai, as a member of the Nissan Group, also aims to be a company that can co-exist harmoniously with society, nature and the environment.

Regarding our environmental response, we have stipulated an Environmental Policy in accordance with Nissan Shatai's Environmental Principle based on the Environmental Principle of the Nissan Group and are endeavoring to promote initiatives from all perspectives.

In particular, we actively advance the manufacturing of environmentally responsible vehicles as a vital mission of the automobile industry, and going forward we will continue to work on the utilization of renewable energy, the electrification of equipment, and energy-saving.

Furthermore, for the coexistence of diverse values and the building of workplaces in which anyone can work comfortably, we will promote activities for diversity, equity & inclusion, workplace environment development, safety, and health. Moreover, we think of our employees as "human resources" rather than "personnel," consider the training of our employees to be one of our important management strategies, and will actively work on the development of our human resources.

In addition, we will work toward harmonious coexistence with local communities through a variety of initiatives by the company.

We will continue to actively interact with communities and conduct community welfare activities and volunteer activities for disaster recovery, as well as learning support activities for elementary school students.

Meanwhile, recognizing that defense against rapidly increasing cyber-attacks in recent years is a priority issue, we are implementing strengthened cybersecurity measures while accelerating our digital transformation initiatives.

We are promoting a variety of initiatives to realize carbon neutral by 2050

We are working on diversity, equity & inclusion for the building of workplaces in which anyone can work comfortably

Training to master painting skills which uses a large screen instead of an actual vehicle. We are introducing education and training which are adapted to the current era

## We are engaged in community contribution activities as an open company.

Plant Tours for elementary school students

Company festivals

Nissan Shatai interacts with communities in many ways. Every year, the Shonan Plant welcomes approximately 20,000 students from nearby elementary schools for tours in conjunction with social studies lessons. The Shonan Plant also has a festival that is open to the public and the plant supports and participates in various community events.

We are promoting working style reforms that recognize the needs of our people. We have received Platinum Kurumin\*1 certification, White 500 Company\*2 certification, and have been recognized and honored with Eruboshi\*3 certification as well.

※1 : Certification based on Article 13 of the Act on Advancement of Measures to Support Raising Next-Generation Children  
※2 : Certification under the Certified Health and Productivity Management Organization Recognition Program promoted jointly by Japan's Ministry of Economy, Trade and Industry and Nippon Kenko Kaigi  
※3 : Recognition by the Minister of Health, Labour and Welfare for companies with excellent initiatives for the active engagement of women in the workplace, among companies that have formulated and submitted action plans based on the Act on the Promotion of Women's Active Engagement in Professional Life

Category	Expense Items	Goals
Environment	CO <sub>2</sub> emissions per unit	Reducing CO <sub>2</sub> emissions per unit by 52% by FY2030(Compared to FY 2018) ※FY2024 Achievements 0.37t-CO <sub>2</sub> / vehicle(FY2018 0.28t-CO <sub>2</sub> / vehicle)

# Creation of appealing products

## Nissan Shatai will meet the diversifying needs of our customers in a timely manner and create products and value which excite our customers.

As commercial vehicle and premium car professionals, Nissan Shatai will provide products which are praised by our customers. We will enhance our specially equipped vehicles and propose new products which meet diversifying needs in a timely manner to our customers.

Our Caravan (export name: URVAN) features a wide variety of variations. Since their introduction, we've continued to strengthen the line's appeal through adding advanced safety equipment, increasing grades, improving fuel efficiency, and enhancing designs, etc. This has led to a line of vehicles that have an excellent reputation in both the domestic and overseas markets.

Our premium brand INFINITI QX80 and our North American Armada SUV, evidenced high praise through the results of our global market surveys and comments from local vehicle journalist associations. In addition to conventional driving support systems, the NV200 Vanette has been equipped with Emergency Assist for Pedal Misapplication, a safety function that prevents pedal misapplication, and features a 7-inch display meter with improved visibility and functionality that makes it easy to see a wide variety of vehicle data.

Going forward, we will continue to aim for rapid vehicle planning based upon market surveys, swift vehicle commercialization and pro-active sales support, production of service parts and also aim to expand the CASE\* businesses including electrification, and we will further strengthen the unique initiatives of our companies that allow us to meet a wide variety of customer needs.

※CASE : Connected, Autonomous, Shared & Services, Electric

With the MYROOM series, we are proposing new in-car accommodation which enables you to relax by bringing your favorite room into nature.

We have a lineup featuring the highly livable "CARAVAN MYROOM" and the more compact and mobile "NV200 Vanette MYROOM."

### The Caravan specially equipped vehicles which ensure that our customers' needs have been met swiftly and accurately

The specially equipped Caravan has many variations of the Caravan all feature leading-edge safety, functionality, and convenience, while ensuring that our customers' needs have been met swiftly and accurately. The customization of these vans is performed by Auto Works Kyoto, a Nissan Shatai group company. The lineup includes a high-spec ambulance "NISSAN PARAMEDIC", emergency / medical vehicles, fire-fighting vehicles, and kindergarten buses.

The Patrol has a history of more than 70 years as a vehicle produced by our company. While inheriting its legacy, it achieves advanced design and functionality along with robust performance, and enjoys tremendous popularity in the Middle East region.

The Armada is a sister model that shares basic components with the Patrol. We also have a lineup that includes the off-road "PRO-4X" trim, which is available for Nissan's full-size SUV and pickup truck models.

# Evolution and deepening of uniqueness

## Nissan Shatai will continue to explore innovation, efficiency and flexibility through technologies and ideas brimming with uniqueness.

Nissan Shatai has two production locations including our Shonan Plant and Nissan Shatai Kyushu. The two plants have incorporated the Nissan Production Way (NPW). At the Shonan Plant, we conduct efficient, high-quality production of LCV, an essential part of Nissan Motor Co., Ltd.'s lineup. Nissan Shatai Kyushu is carrying out high-mix, low-volume production, where vehicles with structural differences are produced on the same line.<sup>1</sup>

Our plants are supported by one of the strengths of our company: integrated manufacturing. Nissan Shatai has development divisions that focus on design and production of test vehicles, as well as tool & machinery engineering divisions that focus on designing and producing equipment for production facilities. There are also test divisions to check every aspect of our vehicles, with development, production and quality control all being part of the same integrated process. Both the Shonan Plant and Nissan Shatai Kyushu are leveraging this integrated manufacturing system to pursue an efficient production system in line with the number of units produced. Moreover, they build the optimal production technologies and methods for high-mix low-volume products.

Nissan Shatai has a central role amongst global Nissan in terms of commercial vehicles, premium cars and specially equipped vehicles manufacturing. Based around next generation frame-vehicles, the development divisions are working to strengthen manufacturing technologies and make use of ITS<sup>2</sup> techniques. The production divisions are aiming to create "Production lines that are kind to humans" and are moving forward in a planned fashion by placing focus on the company's unique production processes.

Nissan Shatai will further improve the specific technologies it has cultivated to date with the aim of becoming a trusted presence in the manufacturing of commercial vehicles, premium cars, and specially equipped vehicles.

※1 Producing multiple vehicle models on the same line, such as monocoque vehicles (a production method for passenger vehicles and commercial vans where the framework and body are produced as one part) and Frame-vehicles (vehicles where the body is installed on a strong frame such as SUVs, trucks etc.)

※2 Intelligent Transport Systems.

The characteristic of the Shonan Plant is flexible manufacturing on a compact line. It continues to pursue the optimal methods

A meeting to present QFD (Quality Function Deployment) technologies in which the attendees learn the ideas essential for technology development. Not only the development divisions but also the production and management divisions participate

### Inspiring the joy of creating things in our employees and motivating them to engage in technology development! New Products and New Technologies Expo & Ideas Contest

New Products and New Technologies Expo

Ideas Contest

Attempting to inspire the joy of creating things in our employees and connect this joy to the motivation to engage in technology development, Nissan Shatai holds a New Products and New Technologies Expo & an Ideas Contest inside the company once a year. The New Products and New Technologies Expo is an event which is essential as a forum for sharing information about the technologies which have been developed. All Nissan Shatai Group employees may apply to the Ideas Contest, and many employees from all of the divisions and of all ages participate. Sometimes their ideas are adopted in actual vehicles.

A CAE analysis image used to consider frame designs. We will further deepen the manufacturing technologies unique to Nissan Shatai, such as next generation frame-vehicles, etc.

The "flush door handle," which automatically appears when approaching the vehicle with an Intelligent Key, has been installed for the first time in the QX80 as an INFINITI model.

# Sustainability

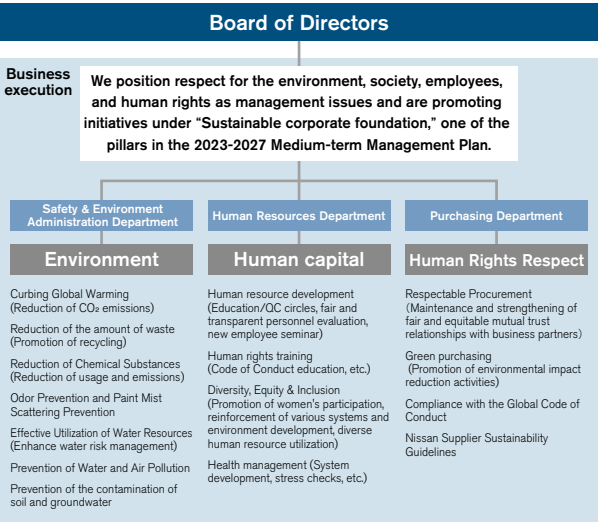

## Sustainability at Nissan Shatai

### View of sustainability

Nissan Shatai and Nissan Shatai Kyushu approach the environment, society, employees, and respect for human rights as management issues from the standpoint of sustainability, and one of the pillars of our 2023-2027 Medium-term Management Plan advocates establishment of a “sustainable corporate foundation.” The “sustainable corporate foundation” mainly involves promotion of initiatives aimed at realizing carbon neutrality in 2050 and also company climate in which anyone can work with motivation and peace of mind.

## Sustainability Strategy Promotion Structure

We report initiatives related to sustainability to the Board of Directors at appropriate times.

## Nissan Shatai’s Commitment to Sustainable Development Goals

### ■ Risk management

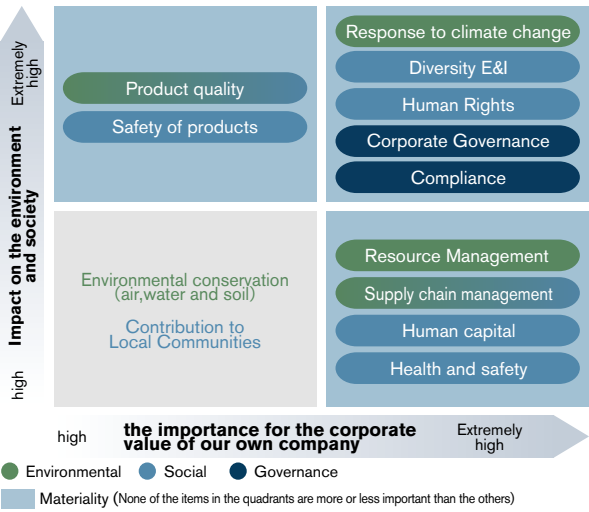

We establish a Risk Management Committee with the Director & President as the Committee Chair to promote risk management, discover and identify matters that interfere with business continuity and risks that threaten stakeholder safety and reassurance, and review and implement necessary measures. These processes aim to prevent risks ahead of time and minimize damages and prevent reoccurrence if they occur. We identify and assess risks based on the frequency of occurrence and scale of damages and manage serious risks via the Risk

Management Committee. Values and activities like this at the Nissan Shatai Group are making a contribution to accomplishing the sustainable development goals.

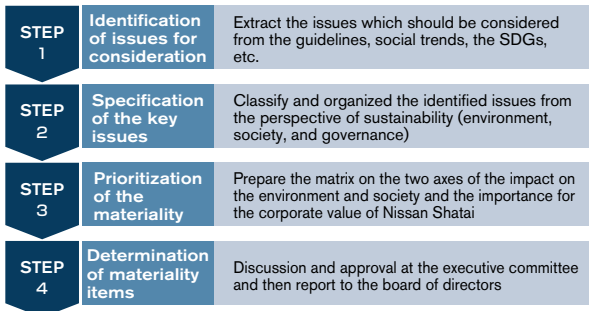

## Materiality (Key issues)

Of the 13 items extracted with the purposes of the sustainable growth of the company and the realization of a sustainable society through ESG initiatives and contribution to the SDGs for global environmental and social issues, we specified 11 items as Materiality (Key issues) which Nissan Shatai should give top priority to tackling.

Based on the concept of double materiality, we organized a matrix on the two axes of “the impact on the environment and society” and “the importance for the corporate value of our own company.”

## The process for determining Materiality (Key issues)

## Initiatives for materiality (key issues) and SDGs goals, and risks and opportunities

category	Materiality	Action items	Initiative Policy	Goals of contributing SDGs	Main risks	Main opportunities
E) Environmental	Response to climate change	Carbon neutral	In addition to the steady execution of existing items, such as renewals to energy-saving facilities, etc., we will promote various activities for realization of carbon neutral by 2050, including the deployment of clean energy, promotion of technology development to respond to CASE, etc.	 	Plant disaster accompanying abnormal weather related to hotter temperatures, increased natural disasters due to climate change, cost increases due to regulatory strengthening, increase in energy costs due to deployment and expansion of a carbon tax	Introduction of renewable energy, development of low-carbon technology
		Clean exhaust gas		 		
		Electrification of cars				
		Renewable energy utilization				
Pursuit of energy efficiency						
Resources management	Promotion of 3Rs (reduce, reuse, recycle) approach	Promotion of vehicle development based on the 3Rs. Reduction of water utilization for manufacturing based on the Nissan Green Program	 	Rise in raw material prices, supply anxiety due to resource depletion, strengthening of environmental regulations	Promotion of resource efficiency, development of recycling technology, sustainable resource procurement	
	Effective utilization of water resources		  			
E) Environmental / S) Social	Supply chain management		Developing a relationship with suppliers based on mutual trust and benefit	   	Severing of the supply chain by abnormal weather, issues with suppliers' working environments	Improvement in supply chain transparency, sustainable procurement, strengthening of cooperative relationships with suppliers
	Product quality		Development and production divisions are working together in order to construct a "high quality guarantee process."	   	Recalls due to quality issues, decline in brand image, customer attrition	Improvement in brand value through quality enhancement, improvement in customer satisfaction, increase in repeat customers
	Diversity · Equity & Inclusion		With a basic policy of "being a company where all workers can fully utilize their talent," we promote diversity, fairness, and acceptability	   	Human resource outflow due to lack of diversity, legal issues, social criticism	Innovation through utilization of diverse human resources, improvement in corporate culture, improvement in brand image
	Human Rights		We respect the human rights of all stakeholders and do not condone any discrimination. We prevent forced labor and child labor in the supply chain	   	Legal issues due to human rights violations, decline in brand image, social criticism	Improvement in corporate evaluation through respect for human rights, strengthening of competitiveness in global markets, improvement in brand image
S) Social	Human capital	Human Resource Development	We have developed a personnel evaluation system and training operations aimed at our employees and company growing together Enhancement of employee satisfaction through the improvement of problem solutions	  	Human resource outflow, resource shortage, skill gaps, decline in employee morale	Improvement in employee skills through education and training, enhanced employee engagement, increased employee motivation
		Workplace environment improvements				
		Promotion of work-life balance				
Health and safety	Health management	Promotion of health maintenance and enhancement activities based on the corporate policy that "Only people with sound mind and body are able to work with vigor, peace of mind, and integrity" Promotion of improvement of both hard and soft aspects of the workplace environment aimed at a "safe and people-friendly workplace"		Industrial accidents, productivity decline due to health issues, legal issues	Enhancement of productivity through provision of healthy workplace environment, improved employee satisfaction, enhanced corporate evaluation	
	Occupational Safety and Health					
Safety of products		Safety enhancement of commercial vehicles, premium cars, specially equipped vehicles, and the support business through the application of cutting-edge technologies and responses to social requirements	   	Legal issues, decline in brand image, decline in social credibility	Gaining of customer trust through provision of highly safe products, enhanced brand value, increase in repeat customers	
G) Governance	Corporate Governance	Strengthen corporate governance	Effective implementation of the Corporate Governance Code and establishment of internal control systems Enhancement of security measures based on the business continuity plan (BCP)	   	Management instability due to governance dysfunction, decline in investor confidence, decline in corporate value	Stable management through transparent and efficient governance, gained investor trust, enhanced corporate value
		Strengthen Risk Management				
	Compliance		Development and dissemination of a Code of Conduct, quick identification and rectification of problems using an internal and external hotline system, determination of solutions in the Compliance Committee and implementation of the solutions		Penalties due to legal violations and their responses, decline in corporate value, social criticism	Enhancement of corporate value through legal compliance, strengthened legal compliance functions, maintained and gained social trust

# Sustainability Environmental

## Realization of carbon free society

In environment-related initiatives, based on recommendations by the Task Force on Climate-Related Financial Disclosures (TCFD), we intend to build governance and risk management that address climate change and review risks and opportunities as well as responses in accordance with the climate change scenario. We plan to advance responses recognized risks and opportunities and promote initiatives to realize a "sustainable corporate foundation."

### ■ Governance

We formed an Environment Committee and are promoting organizational activities to reduce the environmental burden by formulating environment-related policies, targets, and goals, confirming progress with the environmental management plans of each department, and discussing revisions to the environment management system. The Director & Senior Vice President, who is responsible for the overall supervision of environment-

related activities, chairs the Environment Committee and periodically reports content from the Environment Committee at the Executive Committee chaired by the Director & President. The Director & Senior Vice President reports discussions and decision items from the Environment Committee at the Board of Directors.

### Environmental audits

In order to confirm whether or not the system is being operated appropriately, we regularly implement internal environmental audits, which adopt an auditor system comprised of in-house certified auditors, and external environmental examinations conducted by third-party organizations.

### ■ Internal environmental audits

In the internal environmental audits, in-house auditors who have received auditor education check the operating status and effectiveness of the environmental management systems, and confirm whether the environmental management systems are being operated properly in each division.

ISO14001 internal auditor training education

### ■ External environmental examinations

We implement external environmental examinations in order to confirm that the environmental management systems conform with the requirements of ISO14001, are being operated appropriately, and are being improved continuously. These include renewal examinations carried out once every three years and maintenance examinations carried out every year. In 2024 we underwent a renewal examination in November. As a result, we were evaluated as satisfying the requirements of ISO14001 and operating appropriately, and our accreditation renewal was approved.

## Strategies, risks and opportunities

For our review of climate change risks and opportunities that affect business, we envisioned a society based on the IEA's 4°C and 2°C scenarios and the IPCC's 1.5°C special

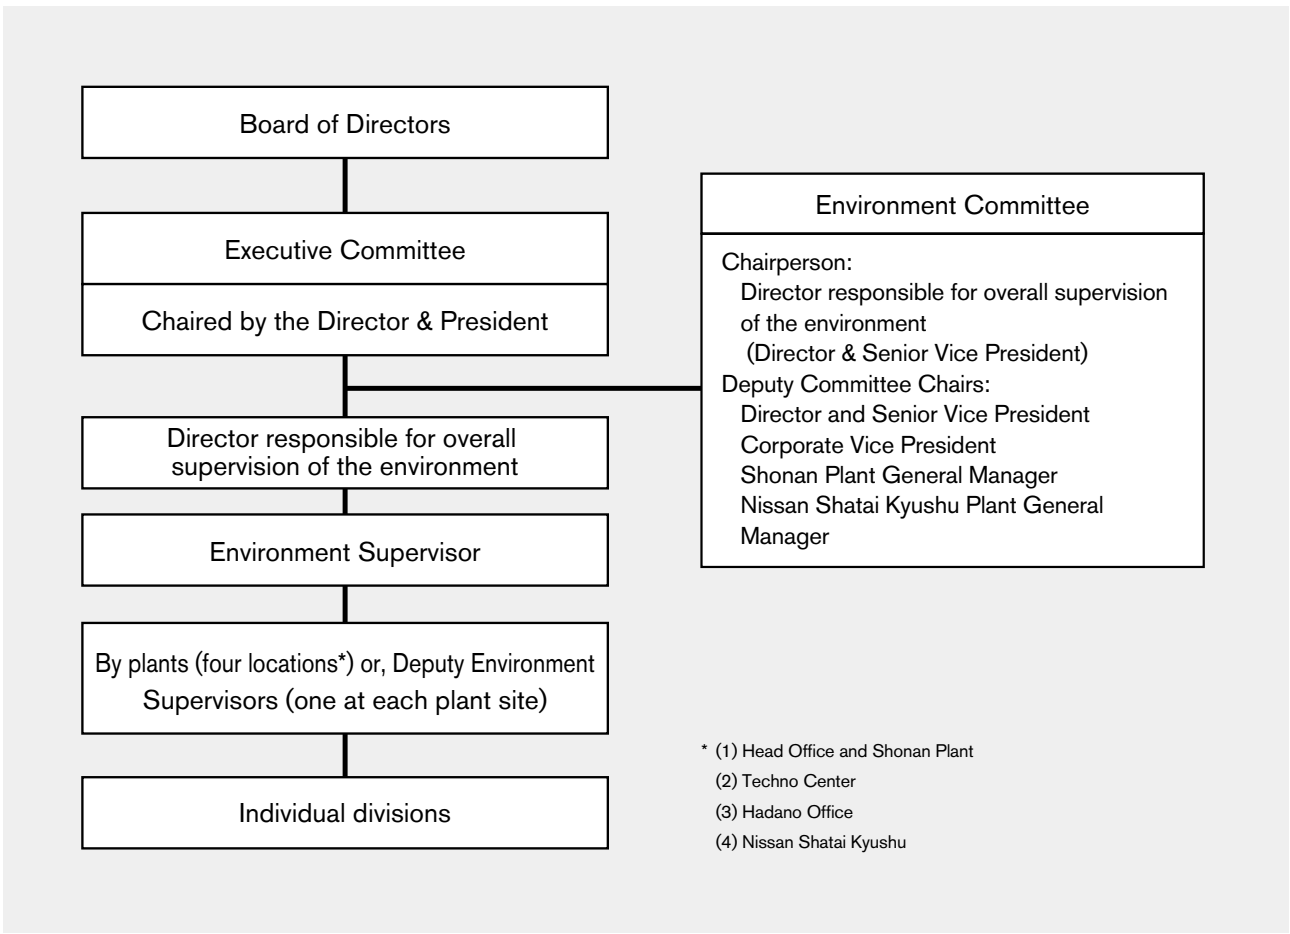

report. The following table presents recognized risks and opportunities. We also intend to cautiously review impact on the company's financial conditions. In the 2023-2027 Medium-term Management Plan,

## Responses to risks and opportunities

Nissan Shatai Group intends to implement the following activities aimed at minimizing recognized climate change risks and maximizing opportunities.

### ■ Realization of technology that improves the global environment via carbon neutrality and responds to customer needs

- ◇ Rigorous utilization of existing technology items
  - Promotion of LEDs for all lighting, renewals to energy-saving facilities, further visualization of energy consumption, and promotion of eco-friendly offices, use of electric vehicles for company vehicles
- ◇ Deployment of clean energy
  - Deployment of solar power and other renewable energy
- ◇ Development of technologies needed for responses to CASE and other trends
- ◇ Realization of quality that exceeds customer expectations
- ◇ Response to legal and social requirements

Category		Risks and opportunities
Risks	Policy and legal regulations	Impact of technology development and production costs to comply with even stricter car fuel economy and emission regulations
		Increase in energy costs due to deployment and expansion of a carbon tax
	Market change	Decline in new vehicle sales volume due to change in consumer sentiment such as increased use of public transportation, bicycles, and mobility services
	Price upturn	Upturn in raw material prices accompanying increase in demand related environmental responses
Opportunities	Abnormal weather	Plant disaster accompanying abnormal weather related to hotter temperatures (suspended operations, restoration investments, etc.)
		Severing of the supply chain by abnormal weather related to hotter temperatures
		Increase in demand driven by development of CASE-related products
		Reduction of energy costs through expansion of investments in

# Sustainability Environmental

## ■ Preparation for disasters and a business continuity plan (BCP)

- ◇ Preparation for serious disasters
- ◇ Response to parts supply issues

## Risk management

Nissan Shatai Group intends to review issues and responses and proceed with actions in addressing risks related to climate change by operating the Risk Management Committee, Environment Committee, and Environment Management System.

## GHG emissions long-term reduction targets

Nissan Shatai will realize carbon neutral by 2050.

## Metrics and targets

Nissan Shatai Group set a goal pertaining to climate change of reducing CO<sub>2</sub> emissions per unit by 52% by 2030, premised on attaining carbon neutrality in 2050.

The scope 1 and 2 CO<sub>2</sub> emissions of Nissan shatai and Nissan shatai kyushu are shown on p.55.

We will continue to promote measures such as switching to renewable energy and changing to energy-saving equipment while assigning levels of prioritization.

## Environmental Management

### Environmental Policy and Environmental Principle

Nissan Shatai &  
Nissan Shatai Kyushu Environmental Policy

**Each and every one of our employees must have environmental awareness and work toward improvements aimed at achieving carbon neutral by 2050.**

1. We must comply with all environmental requirements, including prefectural and local government ordinances as well as national laws and regulations.
2. To protect the environment, we are committed to the following:
  - 1) Efficient use of energy in production facilities and offices with the objective of reducing CO<sub>2</sub> emissions.
  - 2) Appropriate management and reduction of waste materials and increase in the recycling of resources.
  - 3) Prevention of events that could lead to environmental pollution.
3. In designing and developing vehicles, we must consider their environmental impact in terms of factors including fuel consumption, emissions, and recycling.
4. As well as nurturing a corporate climate that values harmonious community relations, we must strive to communicate effectively with local residents by proactively sharing information.
5. To achieve even higher levels of environmental performance, we must continually improve our environmental management systems.

Chief Environmental Officer  
Director and Senior Vice President  
Takuya Nakamura

## ISO14001

Nissan Shatai is aiming to be a company which can co-exist in harmony with society, and we are actively tackling environmental activities. We are aware of the importance of our social responsibility as a company with respect to the environment, and we have acquired accreditation for ISO14001, which is the international standard for environmental management.

### ■ Acquisition of accreditation

ISO14001 accreditation has been acquired for Nissan Shatai companywide. Initially, accreditation was acquired individually in the production division and the product development division, but in FY2010 we acquired accreditation in a form that integrated these two accreditations and in FY2011 the integration was expanded to Nissan Shatai Kyushu as well.

In this way, we are building consistent environmental management systems for the entire group and organizationally promoting sustained environmental impact reduction activities, rather than building individual systems with respect to the production bases and the product development process.

Acquisition of accreditation by the production division

· December 26, 1997

Acquisition of accreditation by the product development division (Techno Center Development Division)

· December 14, 1999

Acquisition of integrated accreditation by the production division and the product development division

· January 21, 2011

Acquisition of expanded accreditation by Nissan Shatai Kyushu

· January 20, 2012

Nissan Shatai Co., Ltd. ISO14001  
accreditation registration certificate

## Environmental Education

As presented in our environmental policies, we believe that "fostering a mindset of valuing the environment in each and every employee" is most important in order to continue being an environmentally-friendly company. For that reason, Nissan Shatai is carrying out the following kinds of initiatives.

### ■ Education and training

Nissan Shatai and Nissan Shatai Kyushu conduct environmental education for all of their employees every year.

### ■ Environmental management systems education

We conduct education every year in order for our employees to understand the content of our environmental management systems and perceive their importance. Regarding the environmental policies of the company, the environmental work plan and the role of each division, etc., at the beginning of the fiscal year the Environmental Management Administrator implements manager education, and each manager implements education for the section employees in his/her own division.

### ■ Special environmental education

With respect to employees carrying out operations in facilities which could have a marked impact on the environment through air pollution and water contamination, etc., we conduct education to make them perceive the importance of environmental management in their work, in order to raise their awareness.

### ■ Environmental accident response training

Departments that use facilities that have the potential to significantly impact the environment conduct training more than 1 times a year in the event of an accident or emergency. This training is designed to minimize damage and prevent spills outside the company in the event of an accident.

Environmental accident response training

# Sustainability Environmental

## Product Development

### Improving Fuel Efficiency

Improving fuel efficiency constitutes the competitiveness of the products, which are vehicles, and at the same time is the social demand imposed on us from the perspective of the conservation of limited global resources. A wide range of technological innovations are necessary for these improvement activities, including alternative energy compatibility and combustion technology development, as well as development of the materials for making cars lighter, making drive-trains highly efficient, reducing air resistance, etc.

#### Outcomes of the activities

##### ◆ Product Initiatives for improving fuel efficiency

With the goal of improving the environmental performance of development vehicles, Nissan Shatai is complying with strict CO<sub>2</sub> emissions regulations while continuously advancing the development of products with outstanding fuel efficiency performance.

The Caravan is a diesel vehicle which, depending on the grade, has achieved the "fiscal 2022 fuel efficiency standard," "95% of the fiscal 2022 fuel efficiency standard" or "90% of the fiscal 2022 fuel efficiency standard."

The NV200 Vanette Van 2WD has achieved "105% of the fiscal 2022 fuel efficiency standard" and the AD 2WD has achieved "100% of the fiscal 2022 fuel efficiency standard."

CARAVAN DX

NV200 VANETTE 2WD

### Exhaust gas cleaning

We are aiming to deliver as many environmentally-friendly clean exhaust gas vehicles as possible to our customers. For that reason, we are collaborating with Nissan Motor to stipulate voluntary target values, and are actively tackling technology development and commercialization.

#### Promotion of product development for realization of an environmentally-friendly vehicle society

Nissan Shatai, which consistently manages development, manufacturing, and product guarantees, has set the environmental goal of "promotion of commercialization conforming with voluntary standard values stricter than the exhaust gas regulatory values stipulated in the law" and is constantly advancing product development based on the Nissan Green Program, which considers the four issues of "climate change," "air quality," "resource dependency" and "water resources" to be the important issues.

#### Initiative to expand commercialization of low exhaust gas vehicles

In order to provide more environmentally-friendly vehicles at more affordable prices and to introduce exhaust gas cleaning technology to as many of our vehicles as possible in order to meet the demands of society, we are working toward the goal of acquiring low exhaust gas vehicle certification for the vehicles we sell domestically.

Regarding production vehicles in Nissan Shatai, in the WLTC mode\* the NV200 Vanette Van 2WD, AD 2WD, and Elgrand vehicles have all achieved the 2018 standard exhaust gas 50% reduction level. The NV200 Vanette Van 4WD, AD 4WD, and Caravan vehicles have all conformed with the 2018 standard exhaust gas regulations.

\* WLTC mode is an international driving mode comprised of the average use time allocation for each driving mode: "city," "suburb" and "high-speed road." City mode: anticipates comparatively slow driving impacted by traffic lights and traffic congestion, etc. Suburb mode: anticipates driving which is not impacted much by traffic lights, traffic congestion, etc. High-speed road mode: anticipates driving on high-speed roads, etc.

AD 2WD

### Reduction and improvement of the recyclability of environment-impacting substances

In order to encourage the recycling of cars as a part of the efficient circulation of resources, it is necessary to design new model vehicles while considering from the design stage what happens to the vehicles after they have been used. For that reason, we are advancing the improvement of material aspects, including restrictions on the use of substances which have a marked impact on the environment and the active adoption of materials which can be recycled easily, etc.

#### Reduction of environment-impacting substances

Based on the global policy of Nissan Motor, we ascertain and manage the chemical substances contained in our products and are advancing the elimination of the following kinds of environment-impacting substances.

##### ◆ Reduction of heavy metal compounds (lead, mercury, cadmium, hexavalent chromium)

Lead: Eliminated (some exclusions including batteries, electronic circuit boards and electrical application solder, etc.)

Mercury: Elimination completed (some exclusions including discharge headlamps and fluorescent lamps for displays). Furthermore, we have eliminated cadmium.

Hexavalent chromium: Eliminated (some territories excluded but in these cases (North America, general exports, etc.)

Nissan has set its own targets and is working to reduce use).

##### ◆ Reduction of specified bromine flame retardants, etc.

Specified bromine flame retardants (pentabromodiphenyl ether, octabromodiphenyl ether): Elimination completed.

##### ◆ Reduction of VOCs (Volatile Organic Compounds) inside vehicles

VOCs is the collective term for Volatile Organic Compounds such as formaldehyde and toluene, etc. which are thought to be the cause of irritation in the nose and throat.

In the NV350 Caravan, in order to reduce VOCs inside the vehicle, we have reduced the volatilization amount of the seats and door trim, floor carpet, etc. by revising the members and adhesive agents used in them. Furthermore, we have reduced the level of the 13 substances stipulated

by the Ministry of Health, Labour and Welfare\* to below the indoor concentration guideline values.

\* The 13 substances stipulated by the Ministry of Health, Labour and Welfare: the 13 substances which are VOCs (Volatile Organic Compounds) that cause sick car and sick house syndrome for which the Ministry of Health, Labour and Welfare has stipulated indoor concentration guideline values (formaldehyde, toluene, xylene, para-dichlorobenzene, ethylbenzene, styrene, chlorpyrifos, di-n-butyl phthalate, tetradecane, di-2-ethylhexyl phthalate, diazinon, acetaldehyde, and fenobucarb)

#### Improvement of recycling Efficiency

With the aim of building a recycling-oriented society, and based on the 3Rs (reduce, reuse, recycle) approach, we have prepared the Recycling Design Guidelines incorporating a variety of improvement proposals for carrying out the design of new model vehicles.

##### <The 3 R>

Reduce: Reducing from the start any materials which will become waste.

Reuse: Reusing used parts as secondhand parts.

Recycle: Using removed parts as raw materials (Recycle)

#### Content of recycling improvement

Content of the recycling	Response of the NV350 Caravan
Adoption of materials which can be recycled easily	Promotion of parts design with a single material Expanded adoption of thermos-reversible resin Implementation of labels for each material (marking)
Active adoption of the materials of parts collected from the market	Utilization of recycled parts from bumpers Utilization of shredder residue

Recycling rate is over 95%.

#### Examples of the main parts recycled in the NV350 Caravan

# Sustainability Environmental

## Production

### Curbing Global Warming

Energy is necessary for the production of vehicles and CO<sub>2</sub> is generated by the consumption of energy. In recent years, Nissan Shatai has endeavored to curb global warming by working to improve its operational and management methods.

#### FY2024 Achievements

Trends in CO<sub>2</sub> emissions per production vehicle

#### 3WET painting greatly reduces CO<sub>2</sub>

In the painting of vehicles there is a process involving bake-drying the paint at a high temperature, and the CO<sub>2</sub> emissions from the painting plant constitute approximately one quarter of the emissions of the entire plant. Nissan Shatai Kyushu has adopted 3WET which eliminates the bake-drying after the application of the middle coat in order to reduce CO<sub>2</sub> emissions.

Moreover, in response to the increase in CO<sub>2</sub> due to the water-based topcoat color base paint we adopted to reduce VOCs (Volatile Organic Compounds) (drying equipment for evaporating the moisture is necessary), we have adopted the "Air Shield Integrated with a Painting Machine " which integrates drying equipment with the paint gun (jointly developed with Taikisha Ltd. ), cutting in half the moisture evaporation time. Due to this, we have reduced the CO<sub>2</sub> emissions from the topcoat color base to the clear paint by 25% (the highest level in the world). Due to these measures, we have reduced CO<sub>2</sub> emissions in the painting plant overall by 16%.

#### Content of the main initiatives in FY2024

##### ◆ Improvement of energy-saving at the production plant facilities

In FY2024, we are continuing to replace conventional lighting with LEDs and have started introducing clean energy, thereby advancing activities to curb global warming.

#### The Progress of the Initiatives

'03	Adoption of a building cooling system which uses photocatalysts
	Construction of an energy monitoring system
'04	Implementation of the downsizing of the boilers in Area #1
	Construction of an improvement system for compressor control
	Installation of freon recovery equipment
'05	Installation of a co-generation system in the Techno Center <Gas engine> Water-cooled 4 cycle, V20 cylinder, 48,700cc <Amount of electricity generated> 920KW <Use of exhaust heat> Used in refrigeration using an absorption refrigerating machine Used in feed-water heating of the boiler <Effect> Reduction of CO <sub>2</sub> emissions: down 650 tons/year
	Implementation of the downsizing of the boilers in the Techno Center
'06	Adoption of energy-saving lamps
	Management of truck transportation
'07	Stopping of the A color topcoat painting production line in Area #1
'10	Commencement of production at Nissan Shatai Kyushu
	Consolidation of production of the three vehicle models produced in Area #1 into Area #2
'11	Implementation of special summertime power saving activities (July to September) (night shift for operating times, changes to holidays, etc.)
	Stopping of the Area #1 painting plant due to the consolidation of the painting process
'13	All of the buildings and facilities in the areas subject to closure in Area #1 are consolidated into other zones
'14	Nissan Shatai: Inverterization of the paint electrodeposition circulation pump Nissan Shatai Kyushu: Adoption of the microfine particle painting method
'15	Nissan Shatai: Improvement of production efficiency by converting the resin plant into a single production line
'16	Nissan Shatai: Conversion of the welfare building fluorescent lights and mercury lights into LEDs Nissan Shatai Kyushu: Conversion of the lighting into LEDs
'17	Nissan Shatai: Reduction of the temperature in the resin painting ovens
'18	Nissan Shatai: Renewal of the Techno Center refrigerating machines
'19	Conversion of the Techno Center Main Design Building fluorescent lights into LEDs
'20	Conversion of the Hadano Experiment Department office building fluorescent lights into LEDs
'21	Conversion of some of the Techno Center Processing Machines Administration Building fluorescent lights into LEDs Conversion of the Hadano Experiment Department workspace fluorescent lights into LEDs
'22	Nissan Shatai: Energy saving through the use of small air compressors at the sheet metal plant of the press factory Nissan Shatai Kyushu: Energy saving by improving electrodeposited chiller function
'23	Promotion of the conversion of lighting to LEDs at Nissan Shatai and Nissan Shatai Kyushu
'24	Introducing clean energy

## Reduction of waste

We are working to encourage recycling of the waste generated in the vehicle production process. Furthermore, we tackle activities to reduce the amount of waste, and advance activities in accordance with our Plan on the Reduction of Generation of By-products, etc. based on the Act on the Promotion of Effective Utilization of Resources, to maintain our recycling rate at 100%.

#### FY2024 Achievements

##### ◆ Reduction of the amount of waste generated

###### Results in FY2024

	Target	Achievement
Nissan Shatai Co., Ltd.	481 tons or less	468 tons
Nissan Shatai Kyushu Co. Ltd.	2,818 tons or less	2,965 tons*

\* Partial treatment of effluent as industrial waste due to water treatment facility construction.

#### The Progress of the Initiatives

'12	Nissan Shatai Kyushu: Reduction of the amount of sludge generated through reduction of the water content ratio of paint sludge (paint sludge reduced 50%)
'13	Reduction of the amount of waste generated through upgrades of the glass sealing supply facilities (40% reduction in the amount of waste in one drum)
'14	Nissan Shatai: Reduction of the amount of sludge generated through reduction of the water content ratio of paint sludge (adoption of the Nissan Shatai Kyushu items)
'16	Nissan Shatai: Techno Center and the Hadano Plant Cost reduction and waste reduction by changing from bumper waste treatment to valuable sales
'17	Nissan Shatai: Proper storage of cardboard (prevention of cardboard becoming industrial waste due to wetness from rain)
'19	Prevention of scattering due to Styrofoam being converted into microplastics when it is collected Extraction of valuable purchased goods due to changes to the waste plastic sorting method
'20	Nissan Shatai: Creating value through engine hanger sorting and collection Nissan Shatai: Expansion of resources recycling by strengthening sorting through the development of waste storage places
'22	Nissan Shatai: Expansion in the creation of value due to separate collection of iron and aluminum
'23	We improved our waste treatment overfenders to make them valuable
'24	Nissan Shatai: Adoption of high-pressure washing machines for slatted floor cleaning to reduce chemical waste

#### FY2024 Waste Treatment Procedure

# Sustainability Environmental

## Reduction of Chemical Substances

The use of chemical substances has a close relationship to regional environmental conservation, so we are working to reduce the amount of chemical substances we use and release.

### FY2024 Achievements

VOCs\*1 account for more than 90% of the chemical substances released by Nissan Shatai. Nissan Shatai has set the target of 43.1g/m<sup>2</sup> or less and Nissan Shatai Kyushu has set the target of 28.2g/m<sup>2</sup> or less and they achieved these targets in FY2024. Nissan Shatai Kyushu has set a lower target value than Nissan Shatai by adopting water-based paint in a part of the painting process.

### Substances included in the PRTR\*2

Amounts of substances included in the PRTR released and transferred in FY2024  
Data aggregation period: April 1, 2024 to March 31, 2025

### Mechanism for substance management

In the case that we wish to newly introduce raw materials, we judge whether or not they should be adopted by evaluating in advance the risks of the chemical substances to the environment and safety based on the New Raw Materials Management System.

\*1 VOCs (Volatile Organic Compounds): the toluene, xylene, etc. used in paint solvents, etc.

\*2 PRTR (Pollutant Release and Transfer Register): Companies, etc. prepare an inventory of the amount of pollutants released into air and water and amount produced as waste (the transferred amount) for each type of pollutant, etc. and register the catalog with the government, etc. Doing this encourages the voluntary reduction of pollutants.

## Odor Prevention and Paint Mist Scattering Prevention

We are actively taking a variety of countermeasures based on our perception that it is necessary to minimize the impact on the neighborhood of the odor and paint mist which are mainly generated from the painting plant.

### Content of the main initiatives

The sources of generation of odor and paint mist and our main initiatives are shown in the following diagram.

#### Painting booth exhaust odor countermeasures and paint mist scattering prevention

- Air freshener spray (exhaust odor)

Nissan Shatai's painting plant adjacent to a residential area has introduced an air freshener spray diffusing system as a countermeasure against odor caused by exhaust from the painting booth. We are also changing our air freshener to a more effective one. In 2019, we expanded the scope of the air freshener spraying to strengthen the prevention of diffusion of the odor.

- High performance filter (paint mist)

fter we have carried out primary removal of the paint mist (fine particles) contained in the painting booth exhaust using wet exhaust cleaning equipment with a water shower, we carry out secondary removal with an even higher performance filter (with a particle diameter of 10  $\mu$  m and a filtration rate of 99.3%) to achieve clean exhaust.

#### Odor countermeasures

In order to ensure that solvent odor does not leak into the region from Nissan Shatai Shonan's painting plant, in addition to the air freshener diffusion we have adopted previously, we have also installed plasma deodorization

equipment to reduce the odor emitted from the exhaust ducts. Moreover, we commenced the introduction of odor reduction by installing activated charcoal filters on the exhaust routes.

- Agglomeration collection equipment (paint sludge collection system)

The dirty water and paint residue inside the circulation water tank can easily decompose and emit bad smells of hydrogen sulfide, etc. Therefore, we are preventing decomposition by pumping in air using an aeration nozzle. Furthermore, we use a pump to collect the paint sludge which is the origin of the odor, send the paint sludge to a thickening tank, and then remove its moisture content before sending it for recycling.

#### Drying oven exhaust odor countermeasures

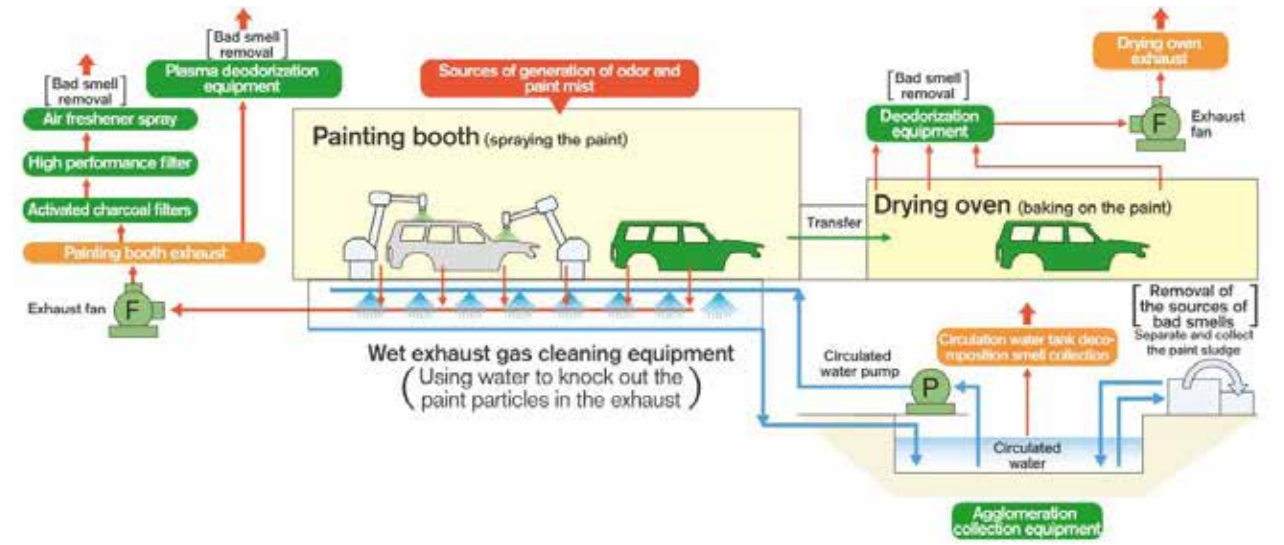

- Deodorization equipment

Cars painted in the painting booth are dried in drying ovens, but they have quite a strong thinner smell. We have installed deodorization equipment in all of the drying ovens, and currently we are using platinum catalyst type deodorization equipment or heat storage type deodorization equipment, depending on the application. The platinum catalyst type is air freshening equipment which breaks down the VOCs by heating them to about 350  $^{\circ}$ C and is effective for countermeasures against VOCs released from drying ovens.

Painting booth exhaust duct      High-performance filters  
Countermeasures against paint mist from the painting process

#### Plasma deodorization equipment

# Sustainability Environmental

## Effective Utilization of Water Resources

We are working on the protection of water resources to contribute to the objective of "enhance water risk management at manufacturing sites" in the Nissan Green Program. Nissan Shatai is also advancing activities in line with this objective.

### Content of the main initiatives

#### ◆ Introduction of the paint sludge collection system (agglomeration collection equipment)

This is a system which reduces the amount of water used by collecting the paint sludge mixed into the water circulating between the painting booth and the sedimentation tank to clean the circulated water and use it repeatedly.

Paint sludge moisture content extraction equipment

This system is also useful for odor prevention. There are a lot of moisture content still remains in the collected paint sludge. We also use this moisture content as booth circulated water by placing a weight on it to squeeze it out as shown in the diagram below, and we are producing good results with respect to reduction in the amount of waste as well.

#### ◆ The initiatives of Nissan Shatai Kyushu

Nissan Shatai Kyushu has introduced state-of-the-art equipment incorporating the know-how cultivated at Nissan Shatai to tackle the effective utilization of water resources.

#### Management of the amount of water used

Among the vehicle production processes, water is particularly necessary in the painting process. We are managing the amount of water used in order to protect water resources.

#### Trend in the amount of water used per vehicle

RO equipment

RO equipment: This is equipment which filters the impurities in raw water to refine it into highly pure water, using the reverse osmosis membrane which utilizes the water "osmosis" phenomenon in reverse (Reverse Osmosis). It can reduce the amount of raw water used for the refinement of water at the necessary purity.

## Prevention of Water and Air Pollution

Nissan Shatai is in an environment blessed with nature including the sea, mountains, rivers and fields, so it has established voluntary standard values and is endeavoring to achieve environmental conservation stricter than laws and regulations in its management of air and water quality. In particular in the Hadano region we are blessed by greenery and water, including the famous water springs of the Tanzawa Mountains, etc., so we always pay close attention to water quality management.

Nissan Shatai Kyushu has a plant facing the Seto Inland Sea and is also implementing strict water quality management together with Nissan Motor Kyushu Co., Ltd. which carries out its production inside the same site.

### Prevention of water contamination

We treat the wastewater from the plants appropriately at a wastewater treatment plant and then discharge it into

public sewers and rivers.

### Prevention of air pollution

#### ◆ Reduction of sulfur oxides (SOx) and nitrogen oxides (NOx)

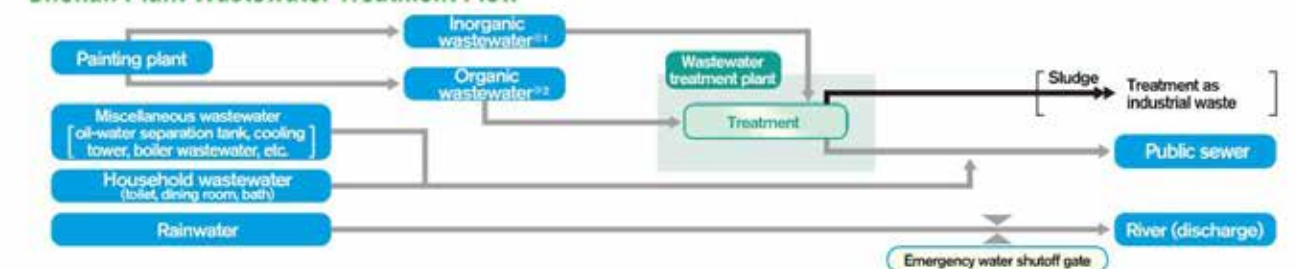

The Shonan Plant uses city gas to greatly reduce SOx. Furthermore, it is also reducing NOx by adopting quality fuels such as city gas, etc., implementing combustion management, and using denitration equipment which reduces the NOx concentration in exhaust gas, etc.

#### ◆ Reduction of Volatile Organic Compounds (VOCs)

Nissan Shatai has a painting process, so it has already been tackling the reduction of VOCs for some time. Going forward, it will work on further improvements.

Nissan Shatai Kyushu has adopted water-based paint in the topcoat color base and has reduced VOC emissions per unit by 28% compared to the Shonan Plant. Moreover, since FY2021 it has worked on adopting water-based paint for the middle coat paint and it completed the switch for all colors in June 2023. Compared to before the switch, it has reduced VOC emissions by 39%.

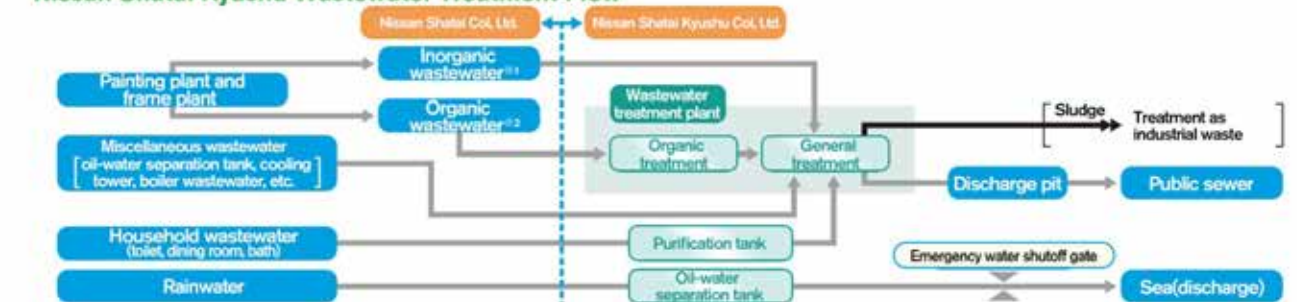

#### Shonan Plant Wastewater Treatment Flow

#### Hadano Office Wastewater Treatment Flow

#### Nissan Shatai Kyushu Wastewater Treatment Flow

① Inorganic wastewater : This is wastewater that does not contain much organic matter. At Paint Plant, water used for cleaning during surface treatment at the pre-painting stage and wastewater from shower testers used to test water leaks in completed automobiles are the main items.  
② Organic wastewater : This is wastewater that contains a large amount of organic substance. Major items include wastewater generated when a car body is washed with water after underpainting with electro-painting.

# Sustainability Environmental

## Prevention of the contamination of soil and groundwater

Believing that environment impact inspections of soil and groundwater are important for environmental conservation, we are voluntarily implementing studies on our history of use of the chemical substances we have used in the past, and also soil and groundwater inspections.

### Inspections of Contamination and Our Response

Plant name	Circumstances of the inspection (when the inspections were completed)	Pollutant	Status of response
Kyoto Plant	Inspection when the plant was closed (2000 to 2001)	There was benzene and arsenic soil contamination, but there was no contamination in the groundwater.	oil purification completed (March 2002)
Area #3	Inspections carried out when the previous owner closed the plant as a consequence of a land purchase (2000 to 2001)	There was hexavalent chromium and fluorine soil contamination, but there was no contamination in the groundwater.	oil replacement completed (May 2002)
		There was tetrachloroethylene soil and groundwater contamination. However, there was no outflow from the site boundary and the contamination was limited to inside the site.	Currently we are implementing soil and groundwater purification and monitoring. There is no contamination outflow from the site boundary.
Area #2	Voluntary inspection (2001 to 2004)	There was lead soil contamination in a tiny part of the surface layer, but there was no contamination in the groundwater.	This area is covered with concrete, so there is no concern regarding the scattering of contaminated earth. Furthermore, there is no concern regarding groundwater contamination, but we are continuing the monitoring of the groundwater just in case.
Area #1	Inspection when the plant (2013)	Among the 1,379 locations inspected, soil contamination was confirmed involving tetrachloroethylene, trichloroethylene, and benzene in one location each, lead in 33 locations, boron and hexavalent chromium in one location each, fluorine in five locations, and in groundwater tetrachloroethylene was detected in six locations, benzene in one location, and cyanogen in two locations, and it was confirmed that each of these substances exceeded the designated standards of the Soil Contamination Countermeasures Act.	We have treated each of these locations in accordance with the measures and methods stipulated under the Soil Contamination Countermeasures Act.

In November 2012, Nissan Shatai conducted a soil inspection of the area of Area #1 of Shonan Plant scheduled to be sold in accordance with the Soil Contamination Countermeasures Act and the Kanagawa Prefectural Ordinance on the Conservation of the Living Environment and reported the results of the inspection to Hiratsuka City in December 2013.

Consequently, Hiratsuka City designated it as an "area which requires action" and "an area for which notification is required upon change to form or nature," and from March 2014, Nissan Shatai launched a soil improvement project based on the Soil Contamination Countermeasures Act. It has now completed the project and sold the area.

### Management going forward

We are mapping and managing the history of our past use of the harmful substances which are a factor behind soil contamination.

Before implementing land excavation, we implement soil contamination inspections based on that use history map to prevent in advance the removal of the contaminated soil from the site.

## Purchasing of Environmentally-Friendly Products

Purchasing of environmentally-friendly parts is important for making environmentally-friendly vehicles. We are implementing "green purchasing" which involves giving priority to the purchasing of products (parts and materials) with a small impact on the environment from environmentally-friendly suppliers.

### Implementation of green purchasing

We provide vehicles to our customers, products comprised of tens of thousands of parts, and we are working with the suppliers who deliver those parts on the green purchasing of environmentally-friendly parts and materials with little impact on the environment. The following three items are our purchasing concepts.

- i) Parts and materials with a small environmental impact
- ii) A parts manufacturing process with a small environmental impact
- iii) Suppliers with high environmental awareness

### Reporting of environment-impacting substances data

We ask our suppliers to ensure that the delivered parts and materials conform with the "environment-impacting substances management standard" based on Nissan Motor's own technical standards. At the development stage, we receive reports of environment-impacting substances

data, such as the presence or absence of prohibited substances, the amount of caution-required substances used, etc. We use these reports to ascertain the status of the environmental impact at an early stage, avoid environmental risks, and develop alternative technologies.

### Creation of environmental management systems

In order to ensure that the environmental management systems are robust, we are encouraging our suppliers to construct, maintain the operation of, upgrade, and update their own environmental management systems with "ISO14001 or equivalent external accreditation acquisition."

### Notification of the Environmental Management Administrators

In order to promote green purchasing activities by our suppliers and to strengthen their collaboration with Nissan Shatai, we get our suppliers to appoint an Environmental Management Administrator. Through those Environmental Management Administrators, Nissan Shatai provides information to the suppliers about our environmental activities and the environment impact of our products.

## Quality Guarantee Approach and Initiatives

The demands of our customers with respect to the quality of the cars have grown markedly in recent years. Nissan Shatai puts our customers first and the development and production divisions are working together on activities aimed at clarifying issues concerning quality from the perspectives of the customers in order to construct a "high quality guarantee process."

### Car-making which puts heart into every detail

We want to deliver attractive, high-quality vehicles to our customers in a timely manner . That is our approach with respect to our "quality guarantee."Nissan Shatai is utilizing its know-how of car-making over many years to put in

place product "development" and "production" systems suitable for the new era and is adopting a strict and consistent attitude to quality from the "design" and "testing" stage.

In the "development" stage, we stand in the position of our customers to carry out evaluations incorporating our accumulated know-how at each stage, including the drawings, trial CAD data, and trial production and, in order to ensure quality which satisfies our customers, we establish and confirm checkpoints at many places for the purpose of production.

In the "production" stage, we efficiently operate the vehicle body assembly process using robots controlled by computers, the paintwork quality check process, and the car assembly process which is carried out by people proficient in the work standards in order to produce highly reliable products. All of the products are shipped after passing rigorous inspections of the processes in the production sequence and the completed vehicles.

Our initiatives continue even after the products are shipped. We promote "QRQC (Quick Response Quality Control) activities," initiatives to accurately grasp market information and reliably respond to that day's information within the same day, and are endeavoring to improve quality and reliability even further.

At the same time we are reflecting the demands and opinions of our customers and sales companies in the building of our new models. That depends on analyses and rapid improvements using meticulous collaboration with "development" and "production" and leads to making products which offer greater satisfaction.

The quality level of the NV200 Vanette made by the Shonan Plant and the Caravan, Elgrand, etc. made by the Nissan Shatai Kyushu's state-of-the-art plant is generated by these kinds of new quality guarantee initiatives and is highly evaluated by our customers.

# Sustainability Social

## Human Capital Policies

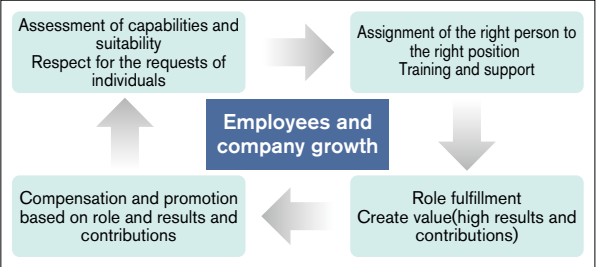

Employees are the source of our corporate growth and advancements. Nissan Shatai Group hence sees employees as "human resources" rather than "personnel." We believe the employees working at our company are the most vital assets and strive to cultivate and education human resources with the aim of being a company that can co-exist with society, the environment, and nature. Vibrant utilization of people with a wide range of values makes it possible to leverage corporate capabilities to the fullest extent and maintain sustainable growth. Nissan Shatai Group discusses important points related to human capital in a meeting comprised of the President and Senior Vice Presidents and reaches decisions on proposals that should be submitted to the Executive Officers Council Committee. We set KPI related to diversity, active participation of women, long-hour labor, and leave usage, confirm progress, and report to the Board of Directors as appropriate. Regarding risk and responses related to impact of resource shortages on work, the Risk Management Committee discusses these topics and reports the results to the Board of Directors.

## Human Resource Development

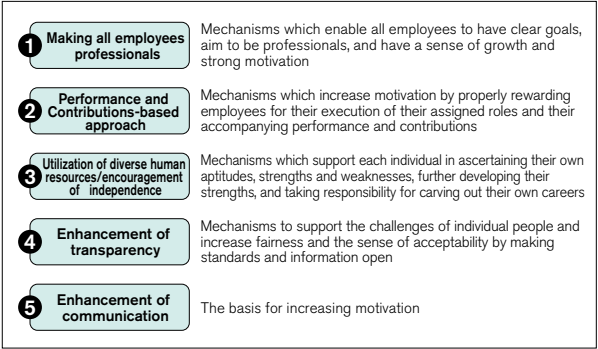

Nissan Shatai Group arranges training operations for individuals to attend classes in accordance with their growth. These training activities range from basic knowledge needed in the work world to cultivation of management human resources with broad understanding. Furthermore, with the aim of fostering a culture of constant improvement, Nissan Shatai Group strongly promotes improvements in product and work process quality via QC circle activities in skilled workplaces and also conducts activities that visualize and resolve issues and Quality Function Deployment (QFD) activities that utilize a quality function deployment methodology in administrative and technology workplaces. It puts efforts into skill education to enhance work efficiency in which employees prepare their own program utilizing management and facilitation capabilities required for managerial positions and digital tools. The personnel evaluation system promotes employee and company growth by basing compensation on employee performance and contributions. Furthermore, the internal awards program that recognizes employee efforts and results aims to boost enthusiasm and motivation. The personnel evaluation system promotes employee and company growth by adopting fair and transparent personnel evaluations and basing compensation on employee performance and contributions.

Furthermore, the internal awards program recognizes employee efforts and results with the aim of boosting enthusiasm and motivation.

### The growth cycle of employees and the company

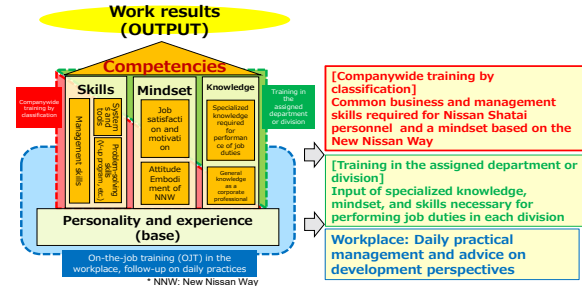

### Five perspectives which realize employee needs and management needs

## Training System Overview

Developing human resources early on who can demonstrate the competencies required in their role at each level and play an active role

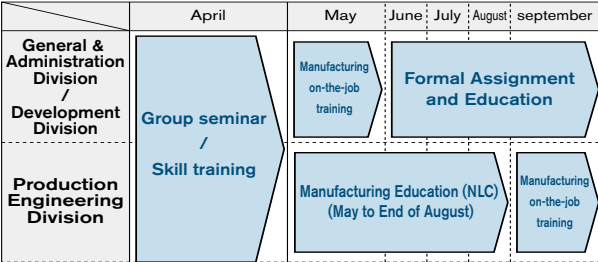

The structure of Nissan Shatai's education system is as shown in the diagram. First, the goal is to develop human resources early on who can demonstrate the competencies required in their role at each level, deliver output, and play an active role. Based on this goal, we focus on developing three pillars: skills, mindset, and knowledge, along with the foundational elements of personality and experience. The blue area represents competencies developed through on-the-job training (OJT) and daily support at the workplace. The green and red areas represent internal training and education. The red area represents competencies essential for working at Nissan Shatai, conducted as companywide education for all employees. The green area covers department-specific training necessary for performing duties at each division. By combining these aspects, we aim for the early development of human resources who can

excel at Nissan Shatai. Additionally, training includes self-development programs employees can choose to take. Overall, we offer over 60 types of training, providing highly comprehensive support.

For advanced specialized human resource education, we implement training programs in which employees who already hold national qualifications such as automotive mechanic certifications and national skill certifications provide direct instruction to other employees seeking to acquire these qualifications, and we have established support systems for qualification acquisition.

### New employee seminar

#### First-year schedule (new employees joining the company in April 2024)

New employees participate in an approximately two-week group seminar followed by skills training in preparation for manufacturing on-the-job training. After completing the basic skills training, they conduct on-the-job training at a plant for one month. By joining an actual production line, new employees learn the appeal and challenges of manufacturing. New employees assigned to development or administrative departments will be formally assigned to their workplaces starting in June. Those assigned to production departments will participate in group training at Nissan Motor's training facility before proceeding to manufacturing on-the-job training, followed by formal job assignment.

## Diversity, equity & inclusion

### Diversity

Vibrant utilization of people with a wide range of values makes it possible to leverage corporate capabilities to the fullest extent and maintain sustainable growth. Nissan Shatai and Nissan Shatai Kyushu have advocated "promoting diversity" as

an important item in our Medium-term Management Plan since fiscal 2015. With a basic policy of "being a company where all workers can fully utilize their skills," we continuously implement actions to deliver even better results by supporting a healthy lifestyle for all employees, not only those involved in childcare and nursing care.

In the 2023-2027 Medium-term Management Plan, we broaden the scope to "diversity, equity, and inclusion" and intend to put effort into activities that advance fairness and acceptability, not only diversity. In addition to "the active participation of women" and "assisting in realization of childcare and nursing care along with work," we aim to build a corporate culture that is comfortable for all employees with greater acceptance of diversity values and views, including age, nationality.

## Promoting active participation of women

◆ Nissan Shatai group is earnestly developing a culture and designing systems on behalf of promoting active participation of women. We seek to expand the percentage of women in new university graduate hires and improve the work environment to facilitate continuation of a career. We also encourage cultivation based on a career plan with the goal of promoting selection in managerial jobs. Roughly 6% of managers were women as of end-March 2025, and we are working to promote empowerment of more women with a goal of 10% in the future.

In the 2023-2027 Medium-term Management Plan, we set a goal to formulate and implement a plan for initiatives aimed at acquisition of "Eruboshi" certification, and in FY2024, we acquired the highest of "Eruboshi certification," the third stage (three stars). We will continue to advance initiatives and practices for maintaining the certification. Furthermore, we will strengthen corporate PR and recruitment efforts targeting a wider segment of new university graduates with the aim of bolstering mid-career hires and hiring from a more diverse pool of human resources.

## Reinforcement of systems and preparation of the environment

In addition to existing flex work, short working hours system, and promotion of using annual paid holidays, we are offering support for the joint realization of work and childcare/nursing care, including the introduction of family support leave that can be applied to childcare, nursing care, and other situations, and a teleworking system, and the revision of our systems to make them easier to use, such as converting the absence from work after childbirth into leave, etc. Furthermore, we are also promoting the use of assistance equipment that lightens the load of picking up

# Sustainability Social

heavy items and automation to facilitate the engagement of women in skilled workplaces.

We are reinforcing the environment to enable the continuation of careers and realization of performance through childbirth and childcare and continuously implementing education to foster an internal culture that makes it easy for men to participate in childcare too. In April 2019, we opened a preschool within the company called "Kids' Caravan" and created an environment where it is easy to work during the childcare period.

In order to continue these kinds of initiatives, we conducted an internal questionnaire on Diversity, equity & inclusion to incorporate the opinions of our employees as we endeavor to bolster our activities in this area. Going forward, we will continue to measure their effects quantitatively.

Results of an internal questionnaire on Diversity, equity & inclusion are shown on P.56

## Platinum Kurumin

Nissan Shatai was the first company with 300 or more employees in Hiratsuka to receive certification based on Article 13 of the Act on Advancement of Measures to Support Raising Next-Generation Children, which is commonly known as "Kurumin" certification, in May 2017. Additionally, since July 2020, we continuously acquired "Platinum Kurumin" certification available to "Kurumin" certified companies that conduct even more advanced initiatives.

In January 2025, Nissan Shatai was selected from among the companies that formulated and submitted action plans based

## Eruboshi

on the Act on Promotion of Women's Participation and Advancement in the Workplace to receive the third and highest level of "Eruboshi certification," which is granted by the Minister of Health, Labour and Welfare to companies that have made excellent efforts related to the active participation of women.

## Utilization of diverse human resources

Nissan Shatai Group does not set specific numerical goals for managerial positions given to foreign employees and mid-career employees but instead appoints managers based on the concept of "making assignments and appointments of the right person for the right job in accordance with personal capabilities and characteristics," rather than relying on hiring categories or attributes.

In hiring people with disabilities, Nissan Shatai Group advocates maintaining employment at a level above the legally required percentage and actively implementing hiring

activities. Besides hiring new university graduates, it participates in company explanations sponsored by Hello Work and hires a few mid-career people annually. Since fiscal 2021, it launched the Sunshine team that prepares the workplace environment and is contributing to development of a conducive workplace.

Percentage of employees with disabilities(consolidated) are shown on P.56

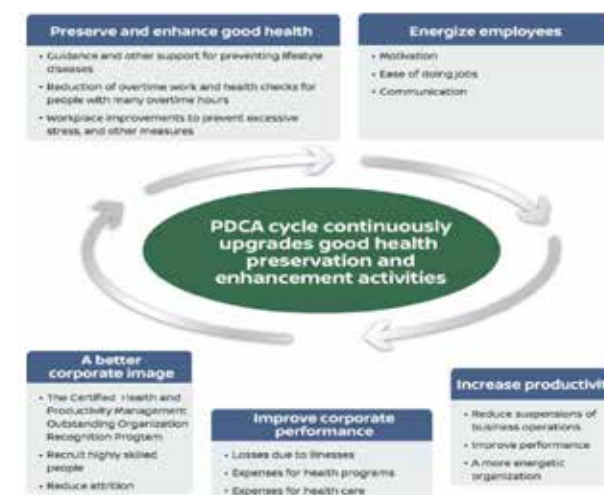

## Employee engagement

Nissan Shatai Group implements workplace improvement activities that address workplace issues and requests. It has prioritized items from the many requests regarding heat-related measures, toilets, changing rooms, welfare buildings, common areas, and dormitories for single people and proceeded with improvements. It intends to continue efforts through close communication with employees and confirmation of requests. Furthermore, Nissan Shatai Group prepares and distributes a pamphlet that covers company topics, connections to SDGs, contributions to local society, awards received at external events, and other results that reflect employee efforts and are a source of pride. It plans to continue preparing the pamphlet to encourage feelings of happiness and pride regarding work at the group by enabling all employees to share and understand these company initiatives.

## Health management

With a corporate policy that "Only people with sound mind and body are able to work with vigor, peace of mind, and integrity," Nissan Shatai group arrange operations with industrial physicians, public health nurses, medical nurses, counselors, and others, and cooperate with external specialty agencies, and address health maintenance and enhancement activities as organizational capabilities.

Nissan Shatai Group provides health guidance based on health diagnosis results and conducts food seminars and other

events at preventing lifestyle diseases. It also conducts mental health measures such as workplace improvement activities for high stress workplaces based on stress check results and seminars. These data-based efforts have successfully clarified issues and supported activities to prevent mental and physical difficulties ahead of time. It implements the PDCA cycle annually for these activities to review results and intends to deepen and continue activities. Thanks to these efforts, Nissan Shatai and Nissan Shatai Kyushu received certification as a "Health and Productivity Management Organization – White 500" from METI and the Nippon Kenko Kaigi since 2019.

## Human rights philosophy

Group considers the strict adherence to corporate rules and applicable laws and practices fundamental to its business activity. The human rights of all stakeholders must be respected and all Nissan Shatai and Nissan Shatai Kyushu employees must act while upholding the highest ethical standards. Nissan Shatai group do not condone discrimination on the basis of race, nationality, gender, religion, disability, age, place of origin, gender identity, sexual orientation or any other characteristic nor infringement on human rights in the supply chain, such as forced labor and child labor.

## Initiatives related to human rights

Nissan Shatai and Nissan Shatai Kyushu conduct initiatives related to human rights based on the following code of conduct and guidelines to ensure respect for the human rights of all stakeholders as a member of the Nissan Group.

●Global Code of Conduct :  
[https://www.nissan-shatai.co.jp/EN/ENVIRONMENT/HUMANRIGHTS/PDF/NISSAN\\_GCC\\_E\\_2401.pdf](https://www.nissan-shatai.co.jp/EN/ENVIRONMENT/HUMANRIGHTS/PDF/NISSAN_GCC_E_2401.pdf)

●Nissan Supplier Sustainability Guidelines :  
[https://www.nissan-shatai.co.jp/EN/ENVIRONMENT/HUMANRIGHTS/PDF/Supplier\\_Sustainability\\_Guidelines\\_e.pdf](https://www.nissan-shatai.co.jp/EN/ENVIRONMENT/HUMANRIGHTS/PDF/Supplier_Sustainability_Guidelines_e.pdf)

### Human rights training

We implement Code of Conduct education every year for all of our employees, to encourage their understanding, and get them to sign a pledge regarding respect for human rights.

Furthermore, we implement training for newly-appointed managers and supervisors and new company employees to deepen their understanding of diversity, equity & inclusion. We are deepening their understanding of the concepts around human rights and our initiatives for human rights, and we are gaining their understanding for the building and wide adoption of environments enabling vibrant utilization of people with a wide range of values.

## Respectable Procurement

### Purchasing Way

Nissan Shatai aim to achieve sustainable, profitable growth by developing a relationship with suppliers based on mutual

trust and benefit. Through a productive dialogue and capitalization on ideas and recommendations identified with suppliers on a level-playing field, we are able to integrate industry best practice and endeavor to stay ahead of the fierce competition within the automobile sector. Nissan purchasing divisions operate using a fair and transparent process to select suppliers, providing a wide range of opportunities for companies to do business with us, irrespective of their nationality, size or our past business relations. External control of our business practices is ensured through close communication in our day-to-day dealings with suppliers, as well as the regular exchange of ideas through meetings and surveys. We maintain the highest standards of impartiality and fairness in all our business transactions.

●Corporate Social Responsibility Guidelines for Suppliers :  
[https://www.nissan-shatai.co.jp/EN/ENVIRONMENT/HUMANRIGHTS/PDF/CSR\\_Guidelines\\_Suppliers\\_e.pdf](https://www.nissan-shatai.co.jp/EN/ENVIRONMENT/HUMANRIGHTS/PDF/CSR_Guidelines_Suppliers_e.pdf)

●Nissan Supplier Sustainability Guidelines :  
[https://www.nissan-shatai.co.jp/EN/ENVIRONMENT/HUMANRIGHTS/PDF/Supplier\\_Sustainability\\_Guidelines\\_e.pdf](https://www.nissan-shatai.co.jp/EN/ENVIRONMENT/HUMANRIGHTS/PDF/Supplier_Sustainability_Guidelines_e.pdf)

## Green Purchasing Guideline

A variety of environmental challenges--climate change, pollution and scarcity of natural resources-- now effect our entire world. It has become crucial for every individual in the world as well as business entities, governments, non-governmental and non-profit organizations to think and act proactively in order to address these challenges.

Nissan Motor Co. Ltd. (Nissan) has promoted environmental impact reduction through actions such as quality control and substance management in cooperation with our entire supply chain, by sharing the value of Nissan's procurement policy and environmental philosophy with suppliers. Nissan conducts surveys of suppliers' actions related to CO2 reduction, setting science based targets, and ensuring proper management of substances by suppliers for parts and materials through their compliance with "Nissan Green Purchasing Guidelines", as well as with "Alliance Nissan Product Quality Procedure" (NPQP) and "Restricted Use of Substances" of Nissan Engineering Standard. These guidelines and standards are based on "Nissan Supplier Sustainability Guidelines" and "Nissan Green Program (NGP)"

## Plant Tours for Elementary School Students

Nissan Shatai considers conducting plant tours as a part of our social responsibility in our position as an automotive manufacturer. Plant tours are held throughout the year, under the topic of "Japanese Industries" that Grade 5 elementary school students study in their Social Studies courses. In this topic, the automotive industry is raised as a representative example of Japanese industries. In addition to what they learn in the classroom, the plant tours provide students with the opportunity to observe real automobile production lines up close, and to gain in-depth knowledge about vehicle manufacturing by actually experiencing the process.

On weekdays, we often welcome elementary school social studies classes. On holidays and during summer vacation, we conduct a learning program for parents and their children. In addition to local elementary schools in Hiratsuka City, we also provide on-site tours mainly in the Tokyo Metropolitan Area and online tours on "car-making" for elementary schools across the country.

Elementary school students tour a Nissan shatai Plant.

### Plant Tours FY24

• Plant tour : about 15,600 visitors  
• Online plant tour : about 7,300 visitors  
**Total: about 22,900 visitors**

## Open Day

In line with our aim of being an open company, Nissan Shatai organizes Open Days for the general public. At the Shonan Plant, employees take on the role of hosts, and set up many stalls for the event. The "Yu-topia" festival is held every year in the fall, when visitors enjoy a wide variety of events ranging from a charity bazaar, to mini-concerts by idol groups and singers.

Throughout the year, we also hold "Nissan Vehicle Fairs," which brings together the latest Nissan vehicle models under one roof. Special business meetings that offer vehicle sales at preferential rates are also held during these fairs.

Open Day Events FY24  
Festivals : 3 times/year FY24  
(Shonan, Kyushu, Kyoto)

## Cultural Preservation and Promotion

We participate in and sponsor the following organizations and events, and have recreation center "Habu-so" with the aim of culture preservation and promotion.

Shonan Hiratsuka Tanabata Festival  
Shonan Hiratsuka Fireworks  
Hadano Tobacco Festival  
JAPAN MOBILITY SHOW

### ■ Safety and health management

Aiming for a "safe and people-friendly workplace," we are advancing the improvement of both hard and soft aspects of the workplace environment, and working on the building of a workplace in which all employees can endeavor to maintain and improve their physical and mental health, constantly have the willingness to improve, and work energetically with high motivation in a safe and comfortable environment.

Furthermore, we have been operating our safety and health management systems based on the Occupational Safety and Health Management System (OSHMS\*) guidelines of the Ministry of Health, Labour and Welfare. In order to achieve a safe and comfortable workplace, we are implementing a full range of education and training and other risk assessments, and advancing improvements to intrinsic safety.

\* OSHMS : Occupational Safety and Health Management System

### ■ Ensuring fire prevention and disaster prevention

The Great East Japan Earthquake in March 2011 caused an enormous amount of damage primarily in the Tohoku region. It is said that it would be no great surprise if a "Tokai earthquake," "earthquake in western Kanagawa Prefecture," etc. occurred at any time in Kanagawa Prefecture as well,

and it is predicted that in the case that any of these earthquakes occur, Hiratsuka City, where Nissan Shatai is located, would experience shaking with a seismic intensity of about 5 or 6 and enormous harm would be caused. Furthermore, if earthquakes or fires and typhoons, etc. occur, there is a possibility not only that valuable property will be lost but also that the lives of many people, including all of the neighborhood residents, will be endangered, so routine preparations are necessary in order to keep the harm to a minimum in the event that these disasters occur. For that reason, we are endeavoring to enhance our equipment and materials management in relation to fire prevention and disaster prevention, and constantly prepare for disasters because we do not know when they will occur, including establishment of the Disaster Prevention Base (Earthquake Command Headquarters), collaboration with disaster prevention agencies and the Nissan Group companies, regular implementation of disaster prevention training, etc. Regarding initiatives for fire prevention, we conduct fire prevention education for all of the relevant people, and implement workplace fire prevention patrols by workplace experts, etc. throughout the year. Furthermore, we have introduced "F-PES\* evaluations," a Nissan Group common standard for quantitatively evaluating the risk of a fire breaking out, to improve our fire prevention management level.

Initial firefighting activities

\* F-PES: an abbreviation for Fire-Prevention Evaluation System. The system's purpose is to "prevent the outbreak and spread of fires in Nissan and its affiliated companies and subcontractors." It is a system which quantitatively evaluates the risk of a fire breaking out and aims to smoothly and efficiently advance fire prevention operations without any oversights.

### ■ Traffic safety activities

As a player in the automobile industry, naturally we work for compliance with the traffic rules and we are also engaged in activities to improve driver etiquette and prevent traffic accidents.

#### ◆ Activities for traffic accident prevention

We use the test course at the Hadano Office to hold the SDH (Safe Driving School in Hadano) to make an effort to improve the driving skills of our employees.

We are working to prevent accidents by getting the

employees to learn the correct driving position and the correct way to operate the accelerator, brake and steering wheel and to master the method for escaping from the vehicle in the event that it overturns.

Overturning experience Steering wheel experience Accelerator experience

#### ◆ Awareness-building activities for traffic accident prevention

On Safety and Fire Prevention Day, the third Thursday of every month, we raise safety awareness by providing guidance on standing guard in front of our gate.

#### ◆ Participation in the "Safety Challenge Kanagawa" organized by Kanagawa Prefecture

We participate in the "Safety Challenge Kanagawa" which involves teams of three people challenging themselves to achieve zero accidents and zero violations over six months (July 1 to December 31), with the aim of traffic accident prevention.

### ■ Regional contribution activities

On May 29, 2024 (Wednesday) and November 22, 2024 (Friday)

At the Techno Center we endorsed the Hiratsuka City "Town-Wide Major Cleaning" activities and a lot of 400 employees participated in cleaning the outer perimeter facilities.

Techno Center

On July 7, 2024 (Sunday)

Shiraishi Coast, the only remaining natural coast in Kanda Town where Nissan Shatai Kyushu is located, is a shallow coast much loved by the locals who can dig up Japanese razor shells ("Mate shellfish") from spring until summer.

Kyushu area

In order to protect nature at this Shiraishi Coast, the Kanda Town Shiraishi Coast Major Cleaning Operation, which consists of coastal cleaning activities and is organized by the Kanda Urban Renewal and Tourism Association, is held every year, and the employees of Nissan Shatai Kyushu also participate in this operation as volunteers. 30 employees participated in the activities carried out in July 2024 and worked on environmental conservation of the region.

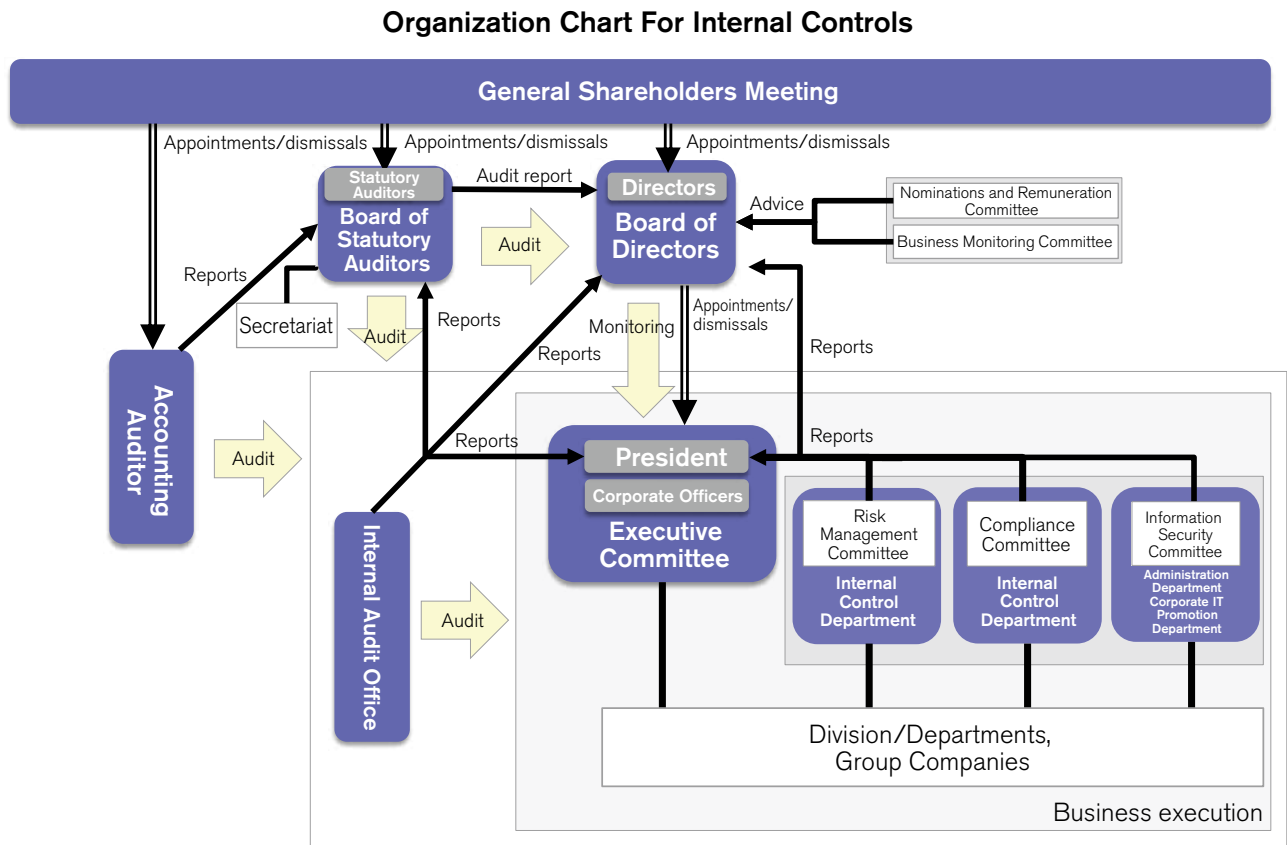

# Sustainability Governance

## Fundamental Policies

We have clarified the management's responsibility to provide explanations and are carrying out proper and timely disclosure of information to shareholders and other stakeholders. Furthermore, to continually enhance corporate value, we are ensuring proper execution of business operations by establishing internal control systems, and further enhancing our corporate governance.

## Corporate Governance Structures

## Policies for deciding remuneration amount

### 1. Policy and method for determining remuneration for individual directors

On March 22, 2022, the Board of Directors approved a resolution concerning partial amendment of the policy for determining remuneration for individual directors. Before this resolution was approved, the Nominations and Remuneration Committee discussed the proposed policy and submitted their findings to the Board of Directors.

### 2. Summary of the remuneration policy

There are two components of remuneration, both monetary, for directors. One is a fixed base salary. The

other is remuneration linked to results of operations that is determined in accordance with the achievement of major Nissan Shatai performance targets and the performance of each director. Outside directors receive only the base salary.

- The base salary is a fixed monthly payment that is determined by taking into consideration executive titles, duties, Nissan Shatai's results of operations, the contributions of each director and other factors.
- Remuneration linked to results of operations is monetary remuneration that reflects performance indicators for results of operations in each fiscal year. This remuneration is paid in addition to the monthly base salary.
- Remuneration linked to results of operations is determined by using companies in similar industries as

benchmarks and establishing a standard ratio of the base salary for each executive title. These standard ratios are determined by the Board of Directors after taking into account the results of a discussion of this matter by the Nominations and Remuneration Committee.

(Remuneration linked to results of operations)

Remuneration linked to results of operations ratio is calculated by multiplying the payment ratio that is established for each title of directors who are also Nissan Shatai corporate officers (40% of FY base salary for the president and 30% for other directors) by the degree to which each individual's targets concerning financial indicators and other performance were achieved in the applicable fiscal year. Financial indicators used for remuneration linked to results of operations are major indicators for the preservation of a sound foundation for business operations for many more years and include consolidated operating income, consolidated free cash flows and other items. Furthermore, these indicators are consistent with the current medium-term management plan and are reexamined as needed to reflect changes in the business climate. To evaluate personal accomplishments, targets for quality and productivity improvements and other items are established that reflect each individual's duties. These items are selected in each fiscal year upon agreement by the president and each director who is also a corporate officer.

## Director's career (As of June 26, 2025)

### President Takashi Tomiyama

Apr 1985 : Joined Nissan Motor Co., Ltd.  
Apr 2006 : Deputy General Manager, Stamping Engineering Dept., Nissan Motor Co., Ltd.  
Apr 2010 : Deputy General Manager, New Vehicle Production Engineering Dept., Nissan Motor Co., Ltd.

<ul style="list-style-type: none"><li>• Medium-term Management Plan basic policy and key activities</li><li>• Compliance with requirements to continue listing</li><li>• Evaluation of Board effectiveness</li><li>• CMS deposits and long-term loans (Recommendation of the Business Monitoring Committee)</li><li>• Quarterly divisional performance reports</li><li>• Final inspection line operational reports</li><li>• Risk Management Committee reports</li><li>• Internal control system operational reports</li><li>• Internal audit reports</li><li>• Sustainability initiatives performance reports</li><li>• Annual Budget and Capital Investment Plan</li><li>• Handling of Business Partners</li><li>• Relationship with the Controlling Shareholder</li></ul>

## Nominations and Remuneration Committee

The purpose of the Nominations and Remuneration Committee is to increase the transparency and objectivity of the procedure used for decisions concerning nominations of director and statutory auditor candidates and remuneration for directors. Therefore, the committee discusses the following items concerning nominations and remuneration in response to requests from the Board of Directors or the President for advice and submits its advice to the Board of Directors.

- (1) Policies and procedures for the selection or termination of a representative director and for selections of directors and statutory auditor candidates
- (2) Proposals at shareholders meetings for the election or termination of directors and statutory auditors
- (3) Succession plan for the president (chief executive officer)
- (4) Policy for determining the remuneration of directors
- (5) Remuneration for individual directors
- (6) Other items as required by the Board of Directors concerning the preceding items

Of the three members of this committee, the majority (two members) are independent outside directors, and the Committee Chair is an independent outside director. Furthermore, an independent outside statutory auditor attends the committee as an observer.

This committee meets based on an annual schedule and in addition ad-hoc meetings are also held whenever necessary. Eight meetings were held in the current fiscal year. The status of attendance by individual committee members is as follows.

Title	Name	Number of meetings held	status of attendance(ratio)
Outside Director	Yasuyuki Ohira	8 times	8 times (100%)
Outside Director	Hideaki Shinada	8 times	8 times (100%)
President	Takashi Tomiyama	6 times	6 times (100%)
President	Haruhiko Yoshimura	2 times	2 times (100%)

\* Takashi Tomiyama attended all of the meetings held after he became a president on June 26, 2024.  
\* Haruhiko Yoshimura attended all of the meetings held before he resigned on June 26, 2024.

# Sustainability Governance

## Business Monitoring Committee

In order to increase the transparency and objectivity of the procedure used for decisions concerning significant transactions between Nissan Shatai and related parties and prevent these transactions from damaging Nissan Shatai and the interests of its shareholders, the Business Monitoring Committee deliberates on these transactions in response to requests from the Board of Directors and the President for advice, and submits its advice to the Board of Directors. The members of this committee consist of two independent outside directors and two independent outside statutory auditors, and the Committee Chair is an independent outside director. Furthermore, a statutory auditor (Full-time) attends the committee as an observer. This committee meets once a quarter and in addition ad-hoc meetings are also held whenever necessary. Seven meetings were held in the current fiscal year. The status of attendance by individual committee members is as follows.

Title	Name	Number of meetings held	status of attendance(ratio)
Outside Director	Yasuyuki Ohira	5 times	4 times (100%)
Outside Director	Hideaki Shinada	5 times	5 times (100%)
Outside Statutory Auditor	Tomonori Ito	5 times	5 times (100%)
Outside Statutory Auditor	Nobutaka Kanaji	5 times	5 times (100%)
Outside Director	Masayuki Imai	5 times	5 times (100%)

## Overview of Evaluation Results for Effectiveness of Board of Directors

The Board of Directors of Nissan Shatai has carried out an evaluation of the effectiveness of the FY2023 Board of Directors taking account of analyses by a third-party organization.

### Overview of the evaluation results

As a result of the evaluation, Nissan Shatai's Board of Directors confirms that the effectiveness of the Board of Directors is ensured. The overview is as follows.

- 1) The Board of Directors is comprised of members with sufficient knowledge and experience.
- 2) The Board of Directors has established sufficient deliberation time and is endeavoring to realize appropriate decision-making and management supervision.
- 3) All the members of the Board of Directors, including Outside Directors and Outside Statutory Auditors, possessing a wide range of experience and expertise, state opinions and advice based on their respective experiences and perspectives, and fulfill the roles that they should fulfill.

In discussions concerning evaluations by all of the Directors and Statutory Auditors, there were opinions regarding further enhancement of deliberations concerning important transactions, continuation of consideration for the members of the Board of Directors, and further enhancement of discussions regarding growth strategies, including improving profitability, and initiatives for ESG and SDGs, with the objective of further enhancing effectiveness. We will continue to work on these matters.

Diversity of directors, Directors' Remuneration are shown on P.53

# Stakeholder Engagement

We believe that correctly understanding the needs and expectations of society through various forms of communication with stakeholders and utilizing this understanding in our corporate activities is extremely important for realizing the growth of the company and a sustainable society. Each selection of Nissan Shatai will implement these kinds of dialogues with many stakeholders and tackle the issues that are recognized.

## Major stakeholders

## Formulation of policies about the provision of information to stakeholders

Nissan Shatai attaches great importance to ensuring internal and external transparency with regard to our management activities, and puts effort into making sure that information disclosure is carried out in an appropriate and timely manner for our stakeholders.

# Outline of NISSAN SHATAI

## Highly advanced facilities and technologies

Nissan Shatai has three main operational bases that consistently implement the operations of development, production and quality assurance. These bases are: Headquarters and Shonan Plant located in Tsutsumicho,

Hiratsuka City, Kanagawa Prefecture;the Techno Center located in Ookami, Hiratsuka City; as well as the Development Divisions that are mainly located at the Hadano Office in Hadano City.

### Headquarters and Shonan Plant

This operation is Nissan Shatai’ s largest, with a Production Division that comprises our Headquarters as well as a distribution base and a plant that engages in car welding, painting, and assembly work.

### Techno Center

The Techno Center is the base for our Development Division, which is responsible for designing and building prototypes. It also acts as the base for the Tool & Machinery Engineering Division that designs and manufactures production facilities.

### Hadano Office

The Hadano Office in Hadano City comes with a test course and other testing facilities, and carries out a batter of strict tests to check on all aspects of cars, including car body strength and endurance.

# Outline of NISSAN SHATAI KYUSHU

## Nissan Shatai Kyushu that is allowed to produce INFINITI branded vehicles by Nissan Motor Co., Ltd.

Nissan Shatai Kyushu, which commenced full-scale operations in January 2010, is allowed to produce INFINITI branded vehicles by Nissan Motor Co., Ltd. It is located in the Kita Kyushu region, where many automobile and parts manufacturers have established themselves, and which offers major distribution advantages to the Asian region that is experiencing dizzying progress and development. Nissan Shatai Kyushu is located in Nissan Motor's Kyushu Plant. It is composed of a Body Shop, Paint Shop, Assembly

Shop, and an Office Building functioning as the headquarters of Nissan Shatai Kyushu. This plant has adopted the Nissan Production Way (NPW) to deliver the quality required for the INFINITI brand and other luxury models, while realizing thorough efficiency and significantly shortened production lead-times that are the pride of the industry. The plant also boasts production lines capable of the mixed production of multiple models, ranging from compact cars to large high-grade minivans. It is also a plant that is both people and environmentally friendly.

Automatic assembly of doors with the aid of robots (Body Shop)

Quality checks on the painted surfaces by robots (Painting Shop)

Assembly of heavy parts using assisting devices (Assembly Shop)

4 wheel shaking machine during the final inspection process

### Body Shop

The introduction of the roller hemming line and other equipment enables the production of high-precision car body frameworks. The Body Shop is also characterized by its flexible and compact production line that includes automatic assembly of heavy parts such as hoods and doors by robots, and transportation of car body and parts by unmanned AGV transportation vehicles.

### Painting Shop

We have introduced the new 3WET painting technology to realize painting quality that is environmentally friendly and ideal for luxury car models. In addition, we have adopted anti-pollution technology and automatic exterior testing devices to achieve high-quality paint jobs.

### Assembly Shop

We have created an evolved car assembly line that enables the mixed production of frame body and monocoque body vehicles. During the final assembly process, all vehicles undergo vibration tests and other tests to ensure that they meet the highest quality levels that are compatible with luxury car models. We have also introduced assisting devices to lighten the work load for operators and create a workerfriendlyworking environment.
